

etherin®

WORLDLY BLENDED BEAUTY.

Design can give life
to a new language.

Etherin speaks the language of our world.

As designers, we're inspired by the world's brilliant artisans and technologists. We intertwine materials, artisanal tradition, environmentally conscious technology and manufacturing techniques discovered on journeys far and wide. The result is truly beautiful objects.

Making Etherin objects.

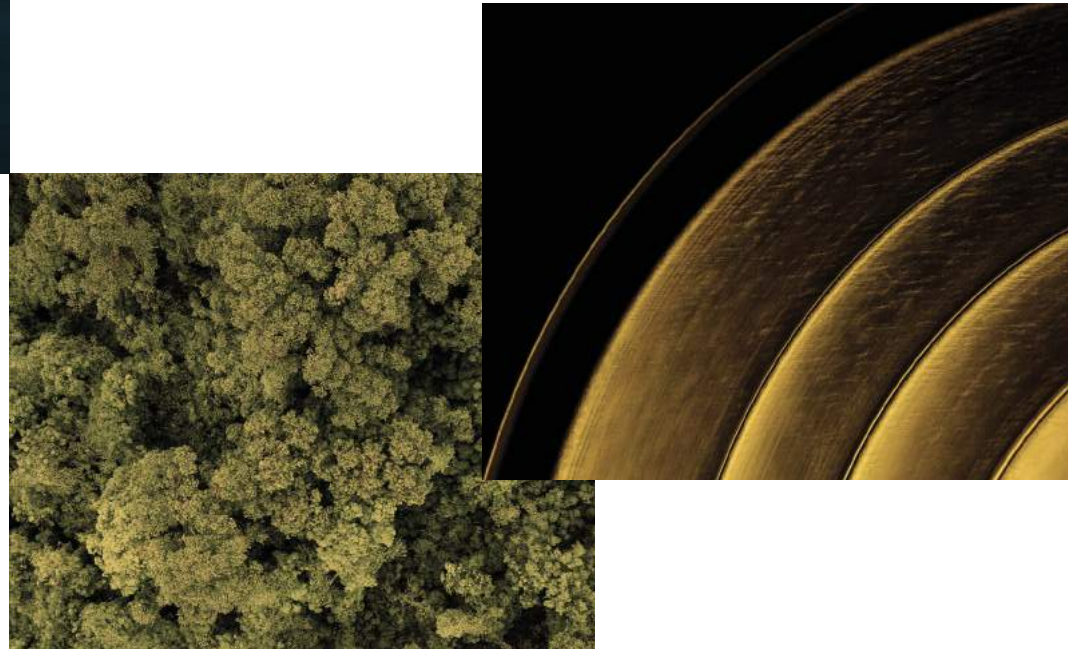

Exquisite traditional craftsmanship.

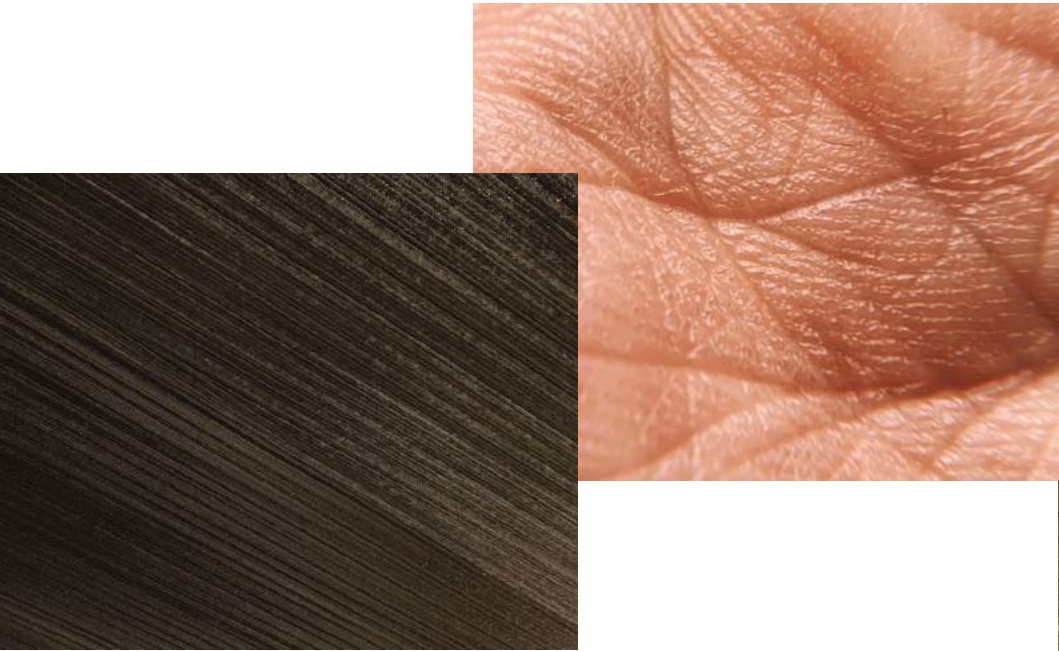

The incomparable knowledge and skill of traditional craft are at the heart of every Etherin object. We believe it is our duty to promote different cultures and traditions they represent. By blending these techniques with sustainable technology, we create objects which speak a new worldly language, one that celebrates heritage and making techniques.

Designed with the best quality sustainable technology.

We believe in the power of design and the determination of sustainable technology. Our focus on quality drives every design decision for the bespoke elements we create. At Etherin, we choose only the best base materials and use energy efficient, recyclable and environmentally conscious components, all sourced from free and fair supply chains. That way we're taking care of people and the planet in the creation of objects that will stand the test of time.

Making Etherin objects.

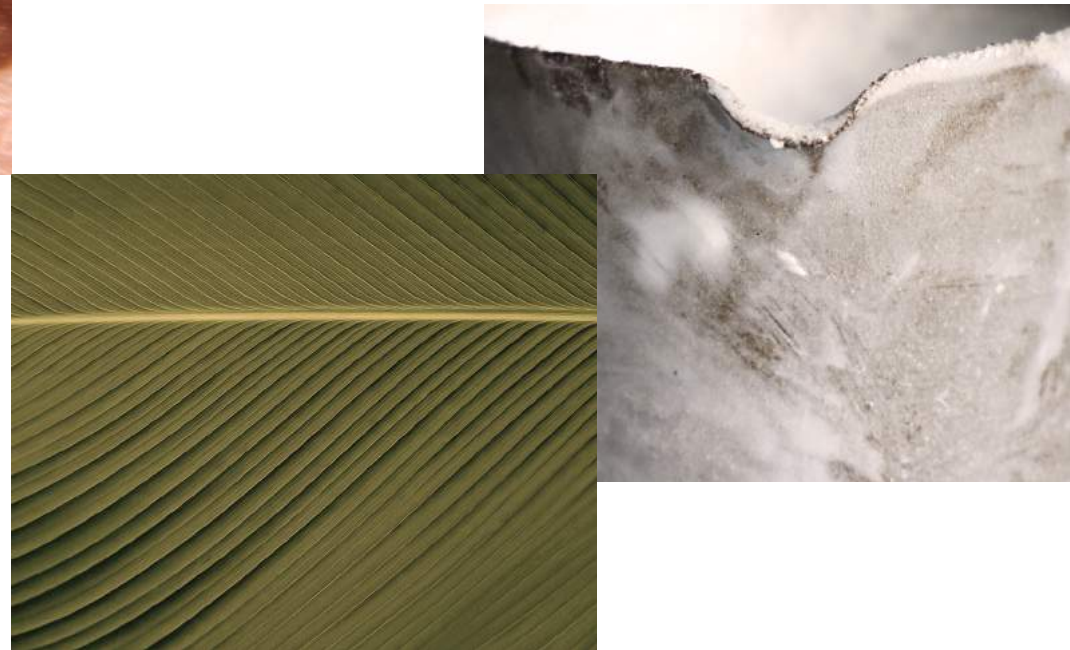

Made by people.

You can't understand another culture without understanding its language. From those that inspire our designs, to hand assembly in Italy, people are at the core of every Etherin object. We believe in a language of our world, insistent on products being touched by the human hand, free from chemicals, made with natural organic materials, which blend perfectly with sustainable technology.

Perfect imperfections.

Our world is not perfect but we find the beauty in it. At least 50% of every Etherin object is handmade by artisans from around the world. We steer clear of industrial manufacturing and embrace independent designers and makers who bring their own handcraft to each object. No two Etherin objects are ever exactly the same, making every object bespoke for you.

Etherin introduces Lomy,
an object of worldly
blended beauty.

Lomy is an interpretation of gravitation.

The gravitational attraction of the sun and moon results in the tides on earth. It acts at a distance, without physical contact. When one rises, the other one goes down. In the same way when viewed from different perspectives, a Lomy lamp provides an interpretation of the natural gravitation in nature.

Based on the Fibonacci sequence, the geometric bamboo construction is made by artisans in East Java, and then blended with pioneering sustainable technology, the best quality LEDs and robust wireless control.

LOMY

After drying under the sun in an Indonesian jungle, artisans who make the bamboo part, cut it into very fine strips. Then, using a traditional handmade eco-friendly technique they begin to create the bamboo shape around a central axis. The bamboo strips are rolled to create a flat plate, after that all the strips are shifted one on top of the other, around the central axis, until the final concentric shape is formed.

The geometric form is then hand sanded and bonded before finally leaving it to rest under the burning sun.

Made by people

The bamboo element is made by hand – no two Lomy lamps are exactly the same. The lamps are also hand assembled in Italy, where the bamboo form and sustainable lighting technology are brought together resulting in an object of worldly blended beauty.

Sustainable technology

To achieve lasting light efficiency for Lomy, Etherin designed a pioneering circular Printed Circuit Board (PCB), that sits on an anodised aluminium support to improve heat exchange and transfer. The best quality LEDs from Osram and Lumileds have been selected and a bespoke electric cable integrated with a stainless steel wire has been created. Each component is measured, designed and selected to deliver the best quality.

A robust, cost effective and future proof wireless lighting solution from Casambi Technology has been integrated.

Casambi technology is a key part of the design with its convenience and user-friendly system. Casambi allows you to personalise, enhance the beauty a Lomy lamp brings to spaces, while controlling through Bluetooth on your phone, tablet or other wireless control devices. With a simple picture of your space the app allows independent management of light. And if you have more than one Lomy lamp they can bring something different to each room through the system.

casambi.com

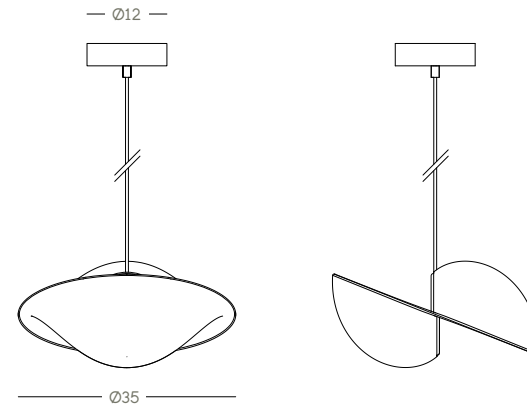

medium

The ethereal form has two opposite bamboo caps which direct light upwards and downwards. The upward cap which points to the ceiling creates diffused ambient light, while concentrated zonal light is achieved with the downwards facing cup. Each Lomy lamp has 1.3 metres of cable allowing you to regulate the length and orientation for any space.

Medium is available in two lighting technology versions:

1. Dimmable via Bluetooth with the Casambi app – the drive located within the false ceiling.
2. Not dimmable option with the drive located within the ceiling rose.

TECHNICAL DETAILS

Material
Bamboo, aluminium
and steel

Light source
4000K 3950 lm CRI >80
Dimmable via Bluetooth
with Casambi app

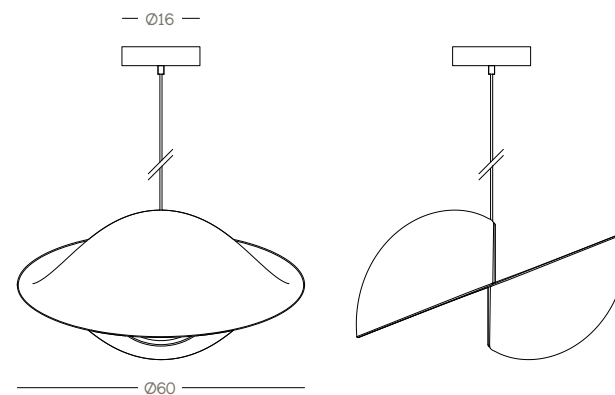

CE  IP 20

large

A larger ethereal bamboo form with two opposite bamboo caps directing light upwards and downwards. The upward cap which points to the ceiling creates diffused ambient light, while a wide zonal light is achieved with the downwards facing cup. Each Lomy lamp has 1.3 metres of cable allowing you to regulate the length and orientation for any space.

The lighting technology for Large is controlled via Bluetooth with the Casambi app. The drive is located within the ceiling rose.

TECHNICAL DETAILS

Material
Bamboo, aluminium
and steel

Light source
4000K 7800 lm CRI >80
Dimmable via Bluetooth
with Casambi app

CE  IP 20

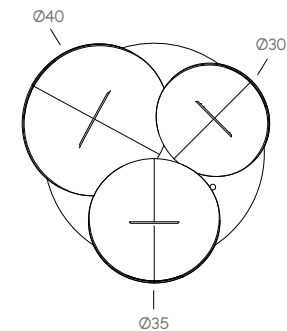

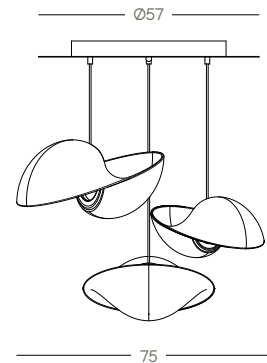

trio

Extremely powerful light source created with three lamps of different diameters, each directing the light upwards and downwards.

All three lamps are separately provided with 1.3 metres of cable, this allows the length for each to be regulated, creating different arrangements and compositions for your space.

The three lamps can be controlled via Bluetooth with the Casambi app. The drives are located within the ceiling rose.

TECHNICAL DETAILS

Material
Bamboo, aluminium
and steel

Light source
4000K 15600 lm CRI >80
Dimmable via Bluetooth
with Casambi app

CE  IP 20
