

Decker Yacht Chair

Folding Lounge Chair

Born of the need for quality stowable furniture on yachts, The Decker Folding Yacht Chair is designed for maximum comfort while folding to only four inches thick. Using materials associated with boating such as stainless, brass and teak creates a seaworthy chair that quickly folds from a lounge chair to a compact form factor that is easy to carry and stow.

Teak wood slats are secured to webbing straps rather than the stainless steel frame to provide flex and added comfort in the seat. A jog in the seat frame creates a handle when folded and provides the needed geometry for an over center design that keeps the webbing in tension and the backrest open while in use.

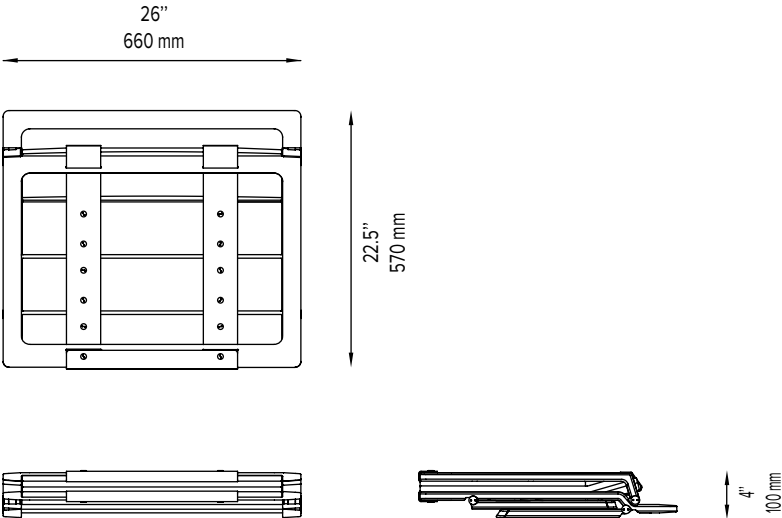

Using similar features with the chair, the folding side table creates the perfect companion for leisure living. The side table has folding legs and handle similar to the chair and collapses to under 3 inches.
