Edge75 Intelligent Sashless Window with Illuminated Railing

Edge75 Intelligent Sashless Window with Illuminated Railing
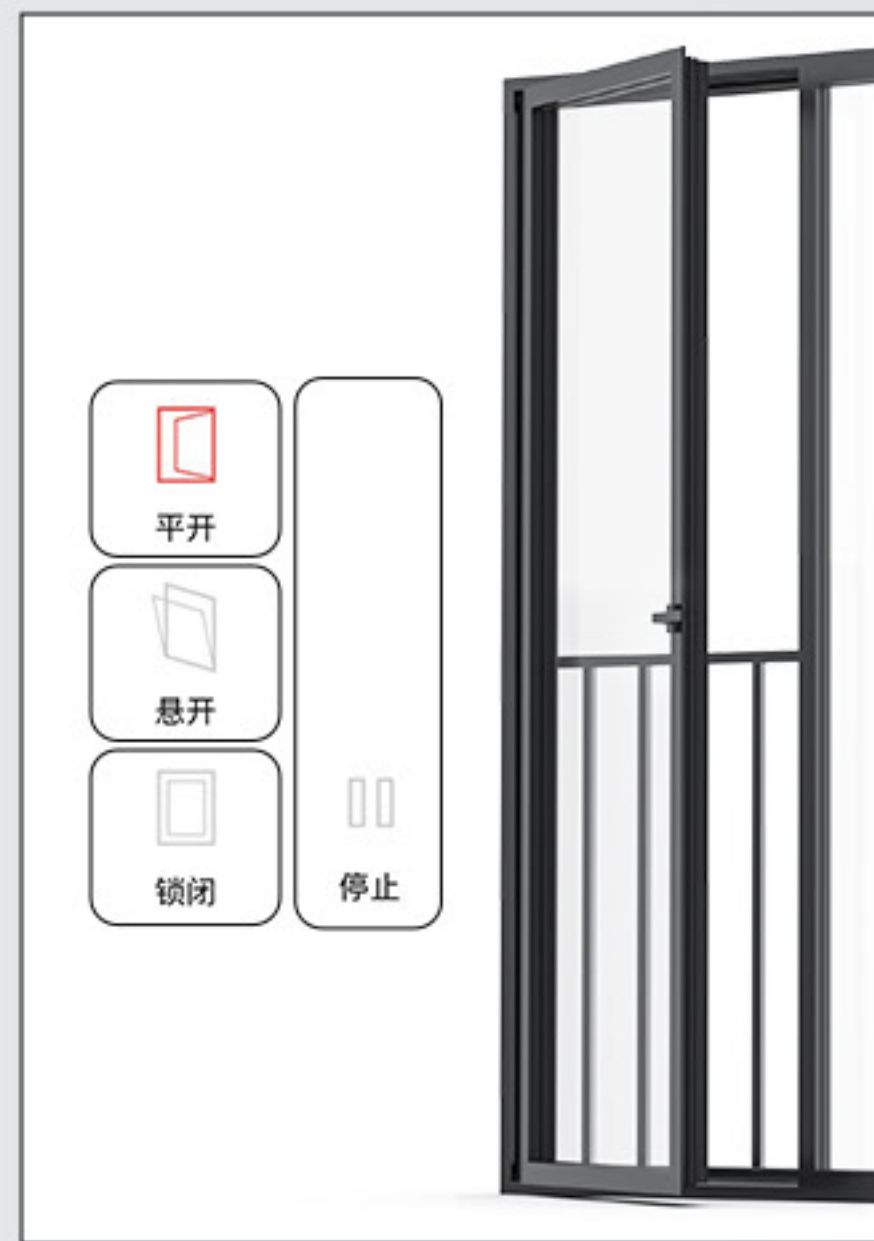

# Industry-first Intelligent Sashless Window with Illuminated Railing

This is the industry's first intelligent sashless window with illuminated railings. Apart from the new structure of intelligent sashless window, a built-in micro motor is hidden inside. Driven by the control system, it allows the electric opening function of horizontal pivoting. Additionally, the external side is equipped with wind and rain sensors, which can automatically close the window in case of bad weather; the internal side is equipped with smoke detectors to automatically open windows for ventilation when monitoring smoke, which fully demonstrate the innovation and application of science and technology in modern smart home.

Brand New Structure
Design of Sashless Window

Introduced by the brand new structure design of sashless window, the openable window is hidden in the frame to avoid the impact on the field of vision. Its external visual effect is completely consistent with the fixed windows to ensure a terse and decent indoor visual effect, harmonious and unified, reflecting the beauty of order in modern architecture.

The LED Light Strip with Full Sense of Technology

Combined the LED light strip with the railing, users can choose different colors and brightness through the mobile App to achieve stepless dimming. The full sense of technology brings great visual impact, minimalist but not simple, which conforms to the design requirements of modern aesthetics, and can be perfectly blended into various application places.
