A revolutionary technology

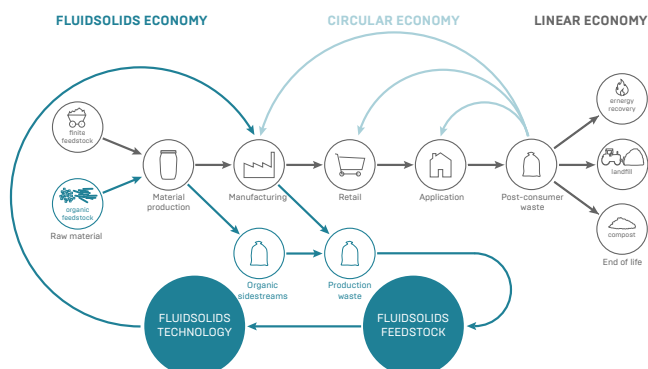

FluidSolids® is an innovative technology developed in Switzerland to produce home compostable composites from residuals and waste streams. The biocomposites feature exceptional mechanical properties, making them suitable for use in countless application areas.

Unlock hidden resources

The technology enables the radical implementation of the circular economy - ecologically and economically. FluidSolids® makes it possible to utilize your own waste streams as source to produce biocomposites and drastically reduce your company's environmental impact.

Use FluidSolids® to get the competitive edge

If you are pursuing a consistent sustainability strategy coupled with cost optimization, FluidSolids Ltd. is your partner from R&D all the way through scale-up, without any compromise in sustainability, design and performance.
