

9 Pin Screw Multi Needle

Industry-leading 9 Pin Screw Multi Needle

It is a nine-pin screw multi needle with a finely adjustable needle that enables a precise and safe drug delivery tool with smart digital injectors. Based on the evidence-based medicine, there is a reduction in trauma to the skin and less bleeding, demonstrating superior safety.

It exerts minimal pressure, reducing indentation and bruising. With accurate adjustment of needle length(scale indicators), it ensures stable needle insertion and solution loss prevention, allowing for adjustable needle retraction, resulting in a more comfortable and safe injection experience.

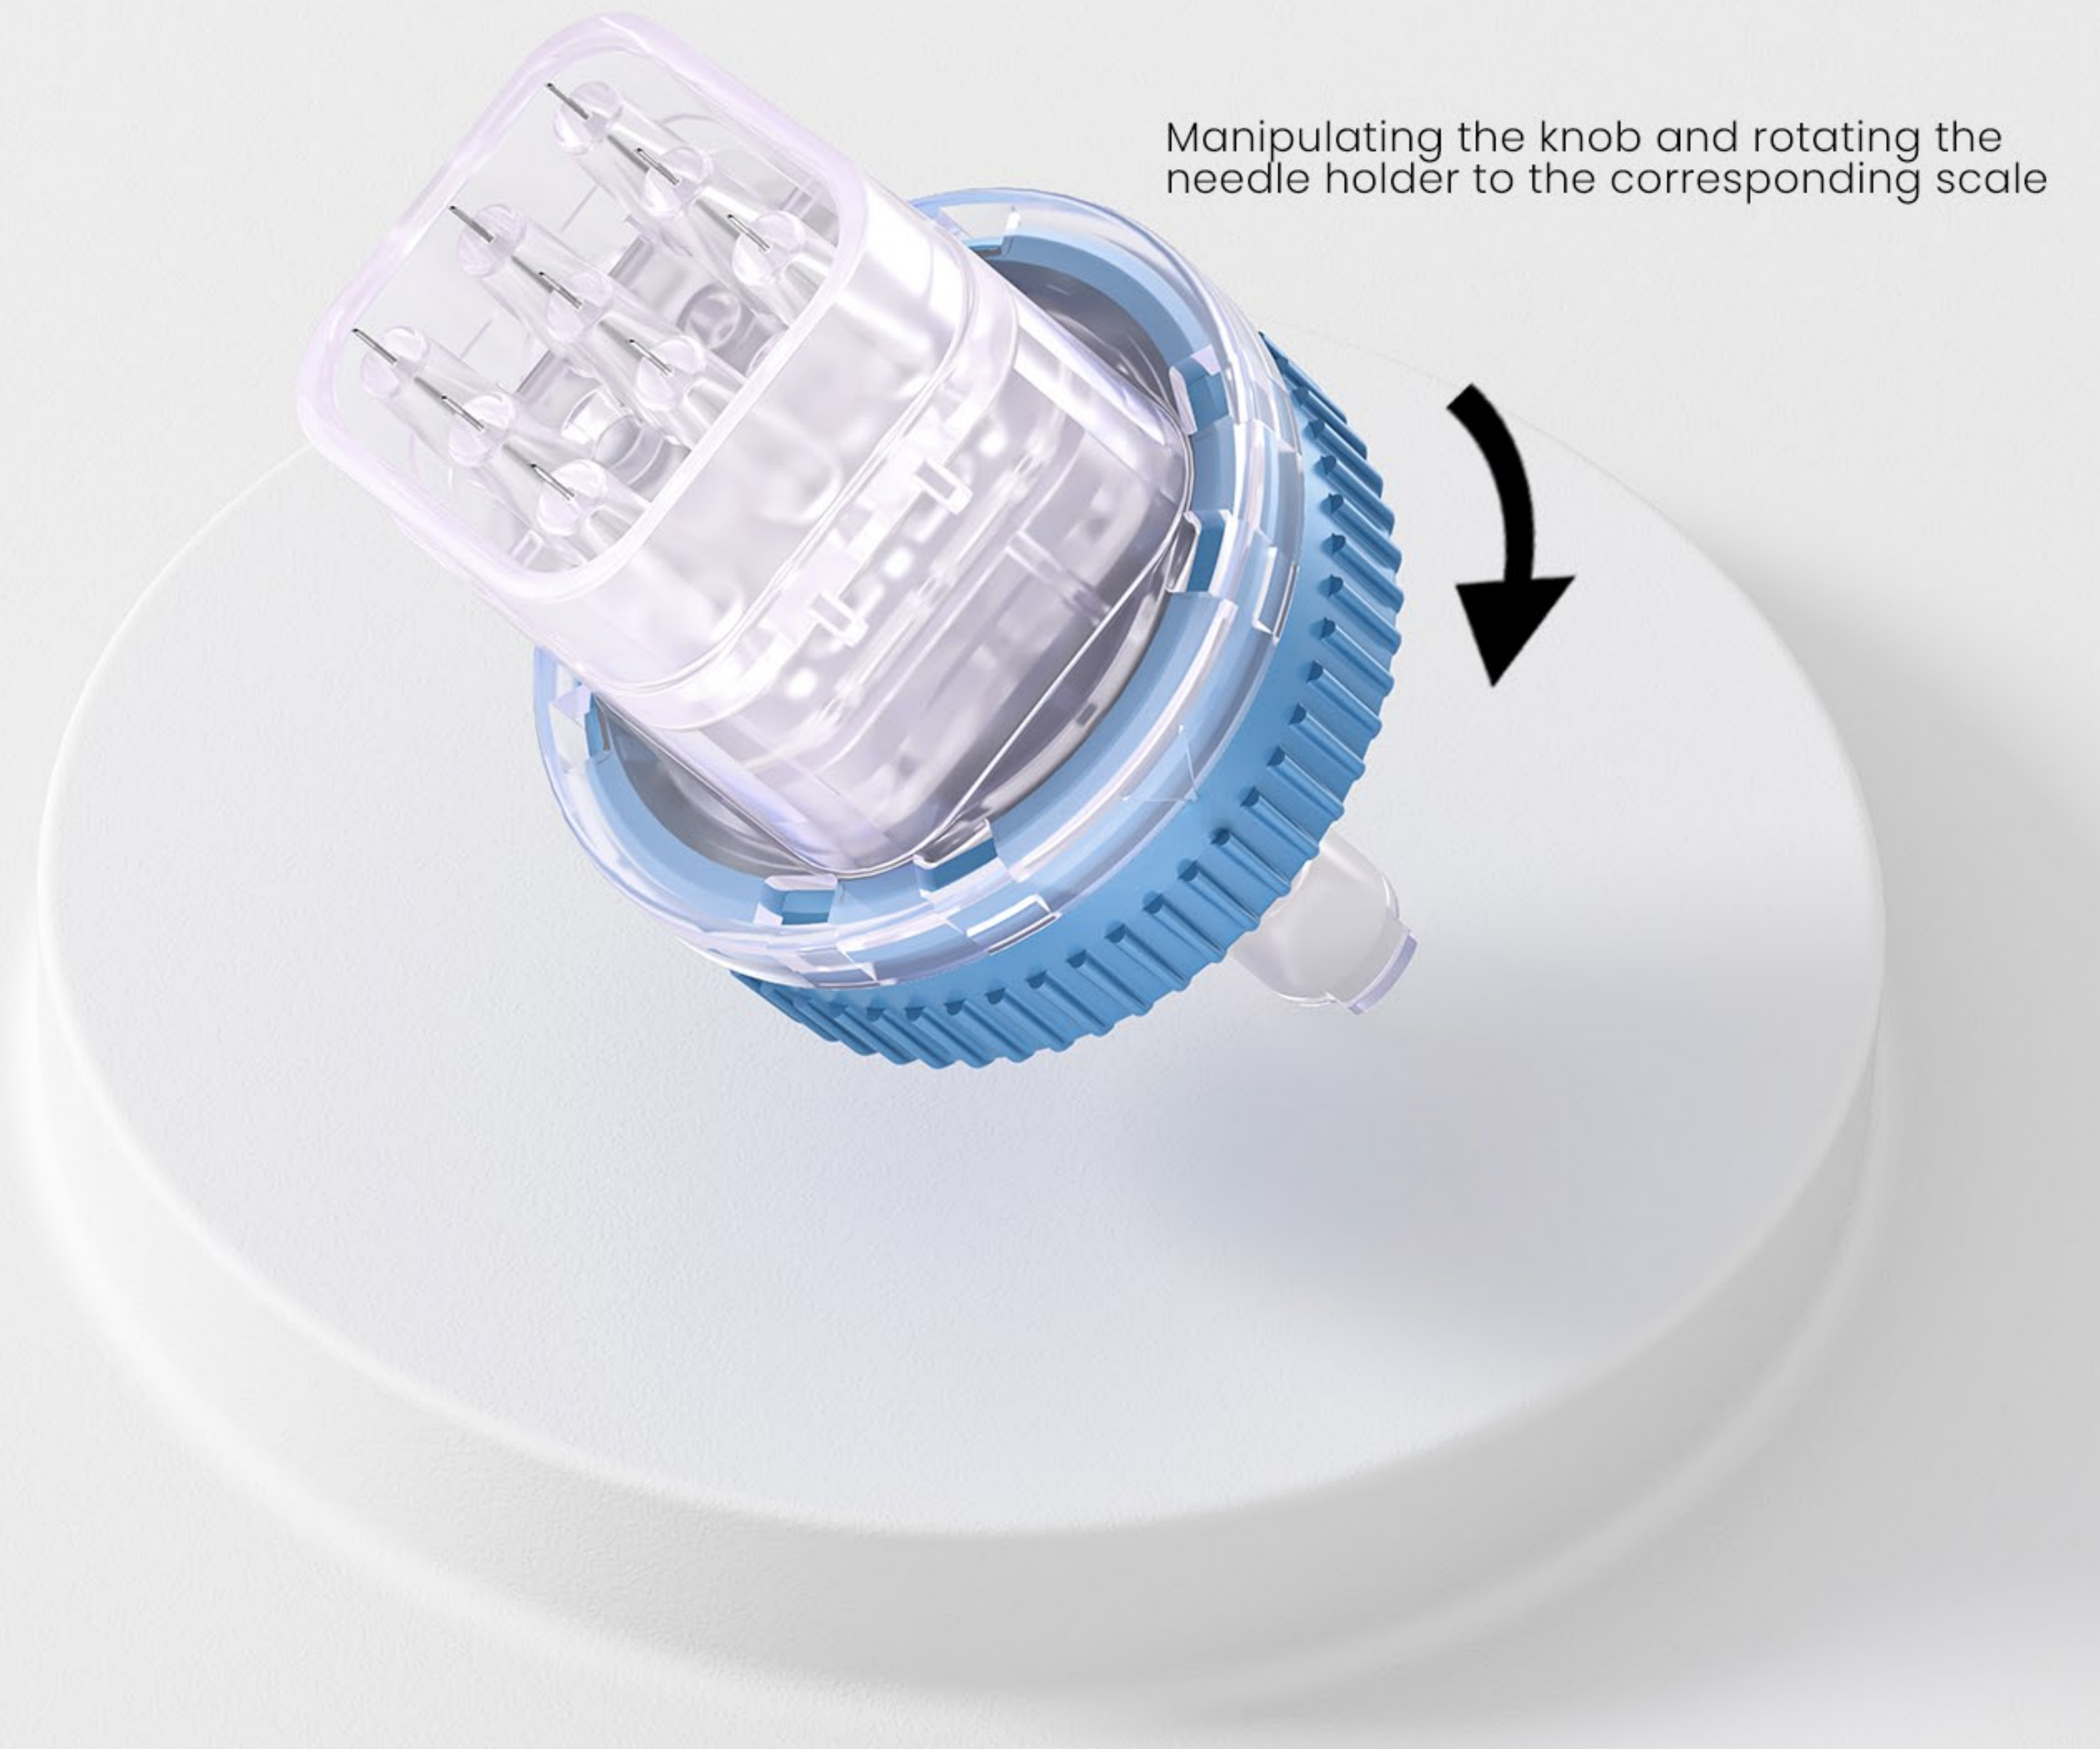

- Reduction in trauma to the skin and less bleeding
- Minimal pressure for reducing indentation and bruising

Innovative Adjustable Needle Length

As the industry's first innovative design with precisely adjustable needle length, the product is equipped with scale indicators. Doctors can visually adjust the needle length based on the varying skin thickness of different facial areas of the patient. This is achieved by directly manipulating the knob and rotating the needle holder to the corresponding scale, effectively reducing overlay errors and ensuring precise and safe procedure.

In Compliance with International Standards

9 Pin Screw Multi Needle features an ultra-thin tube wall and a 34G ultra-fine needle, meeting international standards for smooth injection. Compared to a 32G needle, it reduces pain sensation by 60%, decreases trauma surface by 30%, significantly lowers the risk of infection, and shortens recovery time to 1-3 days. Its unique anti-leak design ensures strong sealing to prevent medication leakage. The self-destruct disposable design prevents repeated use, enhancing hygiene and safety.

Seamless and Compatible Connection Design

Its connector connection design takes into account all syringes that match the Luer connector on the market, and is compatible with all smart digital injectors in the medical and aesthetic fields, building a complete, accurate and safe drug delivery system equipment.

☀ Compatible with all smart digital injectors that match the Luer connector

Minimalist Aesthetics

9 Pin Screw Multi Needle not only emphasizes functional innovation but also embodies design aesthetics. The middle adjustment seat is provided with three colors, which respectively represent three types of products with different needle tube diameters (32G/33G/34G).

The needle base adopts a polished transparent surface, which makes the drug delivery process clearly visible, and is convenient for doctors to visually check the details and make timely and flexible adjustments. The overall design conveys professionalism in a concise and refined style.
