## A Mini PC with Discrete Graphics That Shows Your Personality

TANK 03 is a mini PC with a dedicated graphics card that has excellent performance and shows individuality with a sense of power and technology based on the needs of young people. It has an independent memory source and power supply and passed strict compatibility and stability tests, to make it more efficient, rapid and convenient than integrated graphics. Large-capacity storage space and superior heat dissipation can provide users with an excellent and optimized performance experience.

## Dedicated Graphics Card with Replaceable Working Mode

The product itself is equipped with an independent graphics card. Quiet mode, automatic mode, and performance mode can be switched through the knob on the front, and the light will change accordingly to more directly reflect the current operating mode. Among them, the blue light is the quiet mode; the green light is the automatic mode; the orange light is the performance mode. It also provides various lighting effects such as breathing lights and rainbow lights to provide users with an immersive experience. At the same time, the front display can display time, CPU and GPU temperature, frequency, occupancy and more, which is intuitive and convenient.

## Space Starship Presents A Full Sense of High Tech

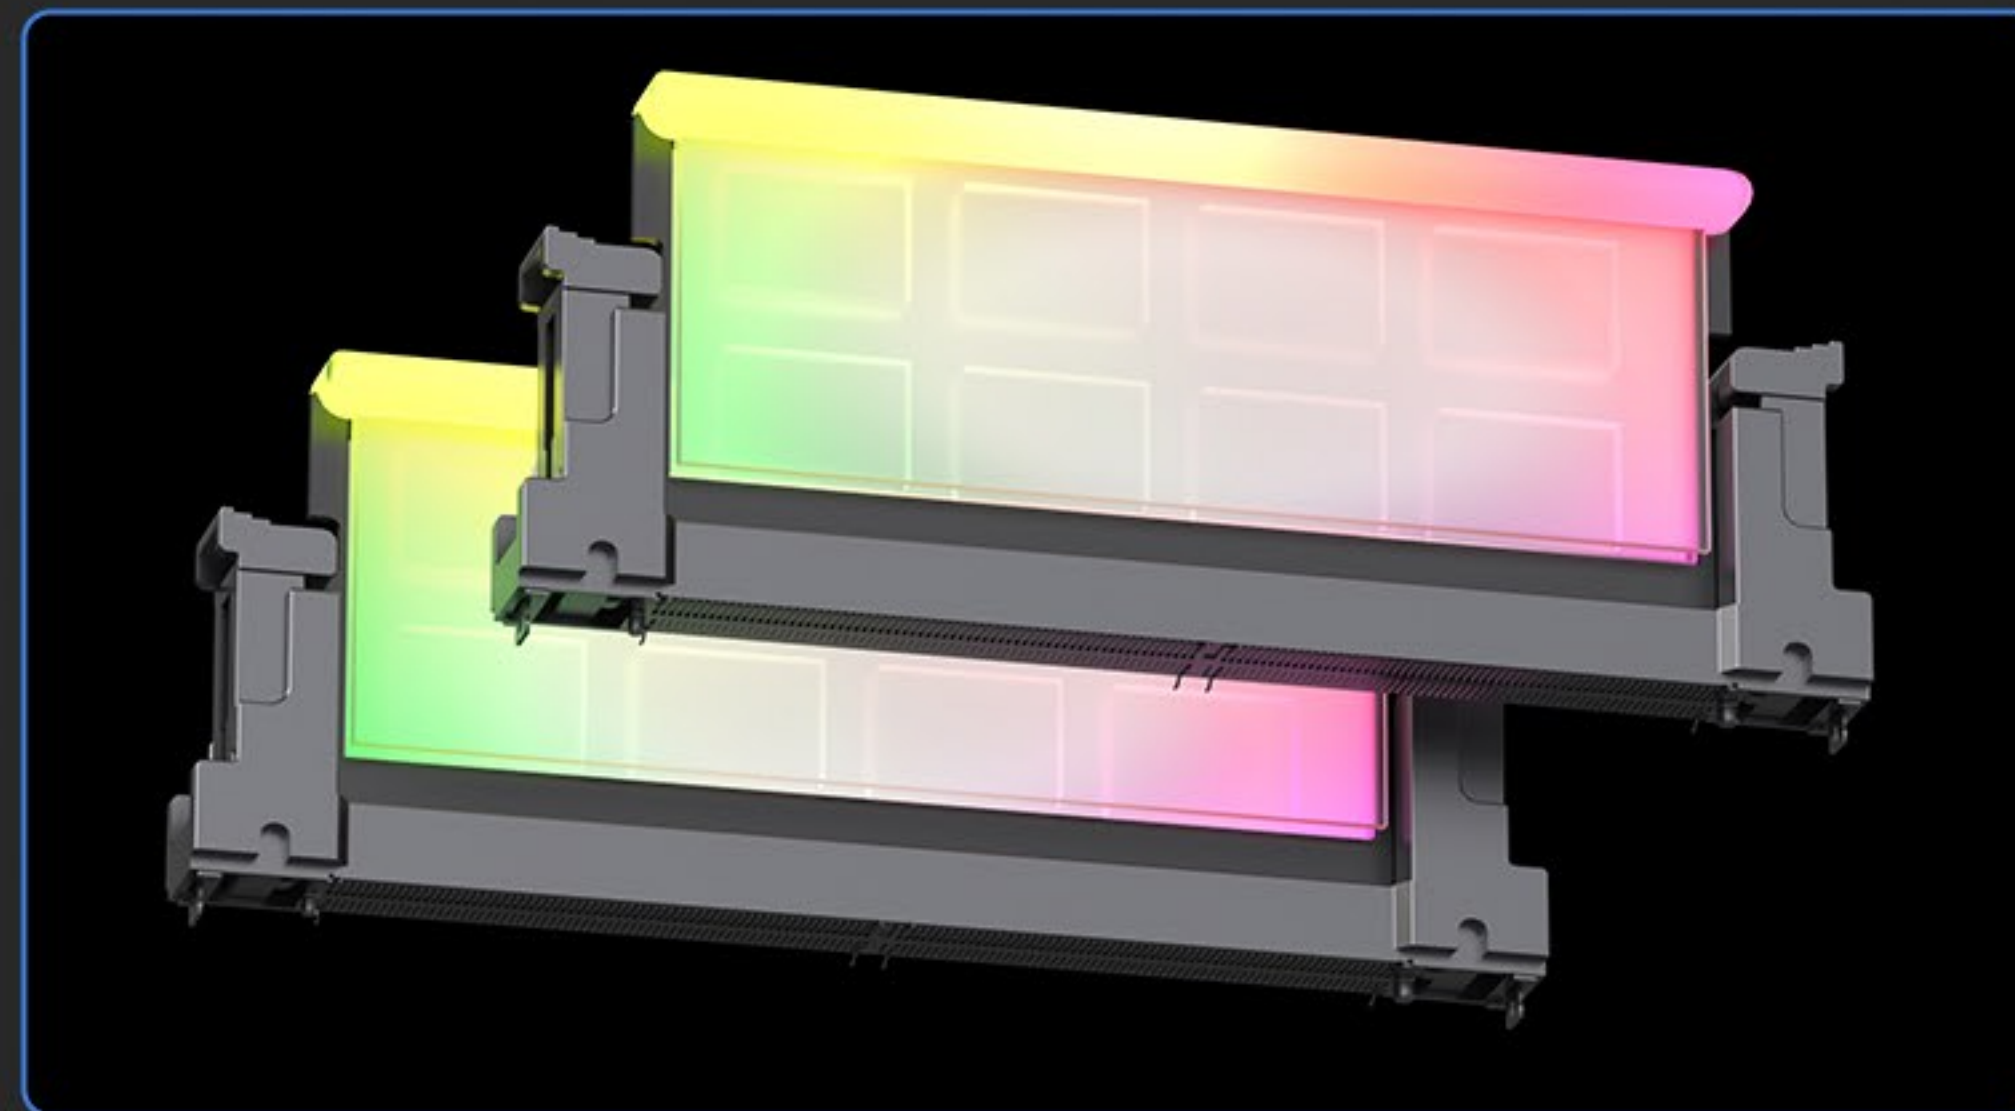

The appearance design is inspired by space starships. With extraordinary creativity and unique mechanical structure language, it draws on the large curved surface of starships and embellishes the details of different colors and lights, reminiscent of starships traveling and fighting in space, depicting cool, trendy and individual styles with a strong visual impression. This integrated and smooth product has a unique appearance that gives it a sense of science fiction and the future, highlighting the unique aesthetic concept.

## Excellent Performance Provides Smooth Experiences

This product adopts DDR5 4800MHz frequency and supports up to two memory of 64G. The read and write performance of high-speed memory is faster and supports the smooth operation of various software. The product configuration is highly flexible, supporting 12th generation i9-12900H and 13th generation i9-13900H, plus 3060M discrete graphics card, AMD graphics card, as well as Wi-Fi 6 and three-screen output that will serve well in higher and more stable frame rate performance with less stuttering. It not only improves the picture quality and fluency of the game, but also makes the graphics processing software faster and smoother, greatly improving users' work efficiency with lower latency and more agile feedback.

DDR5 4800MHz supports up to two memory speeds of 64GB frequency

### Processor support

- 12th generation i9-12900H
- 13th generation i9-13900H
- 3060M discrete graphics card
- AMD graphics card
- Wi-Fi 6
- Three screen output

## User-Friendly Design Meets Versatility

The product has rich interfaces such as 6 USB (including USB3.0), built-in Bluetooth 5, two 2.5Gbps network interfaces, TYPE-C, Thunderbolt 4, SD, DP, audio microphone and more, which can meet the different needs of users in multiple directions and for multiple purposes. Through the quick-release buttons on both sides of the product, the side covers on both sides of the product can be quickly disassembled and installed, so as to facilitate the user to replace the DDR, SSD and WIFI modules that meet the user's own needs, so as to carry out DIY upgrades of DDR, SSD and WiFi on the machine.

*Convenient replacement of DDR and SSD by oneself*

## Mini PC with Reliability and Environmental Protection

Compared with the gaming PC, TANK 03 breaks through the limitation of form and adopts a more integrated three-dimensional design. It is small in size without occupying the desktop, and its components are high-temperature resistant with a more solid power supply and more efficient heat dissipation to protect the graphics card from being burned, and provide users with efficient performance support, which is very considerate. Created with sustainability principles at its core, it uses 30% PCR plastic materials and avoids unnecessary coatings, which reduces carbon emissions and volatile organic compounds by eliminating redundant industrial manufacturing links with industrial pollution, fully practicing the concept of environmental protection.

Mini and compact
