An Industry-leading Gaming Computer

HENJOY is an industry-leading gaming computer with a unique silver-wing design which is simple and elegant and has a sense of technology. The upscale configuration brings players superb gaming experiences. The customized LCD satisfies diverse user needs, providing an immersive gaming experience for users.

ACE

Immersive Gaming Experience

This product is designed to provide users with an immersive gaming experience, helping players show their wonderful and extraordinary operations in an energetic way. By creating exciting and rich game plots and results, players can have deep interactions with characters and environment in the game world, improving the sense of participation and interactive experience of users. With gaming light, it renders excellent atmosphere and visual effects, allowing players to deeply integrate into the game world and generate strong emotional investment.

The Silver-Wing Shape Displays Minimalist Design Aesthetics

This product breaks through the traditional appearance which is either square or round and adopts bionic design, perfectly integrating the shape of wings into the design and matching the perception and operating habits of users. The appearance is inspired by the shape of silver wings which is like a spaceship and is very technological, with the appearance of flying wings implying eternal dreams and pursuits. Simple, symmetrical and modern design perfectly fits the minimalist design aesthetic. The metallic paint on the exterior can reflect light, creating a shiny visual effect that makes the product more eye-catching. At the same time, the metallic paint has good durability and wear resistance and it is not easy to fade or change color, which prolongs the service life of the product. The black transparent panel and upscale shape bring unique attraction to the product.

Simple and symmetrical design

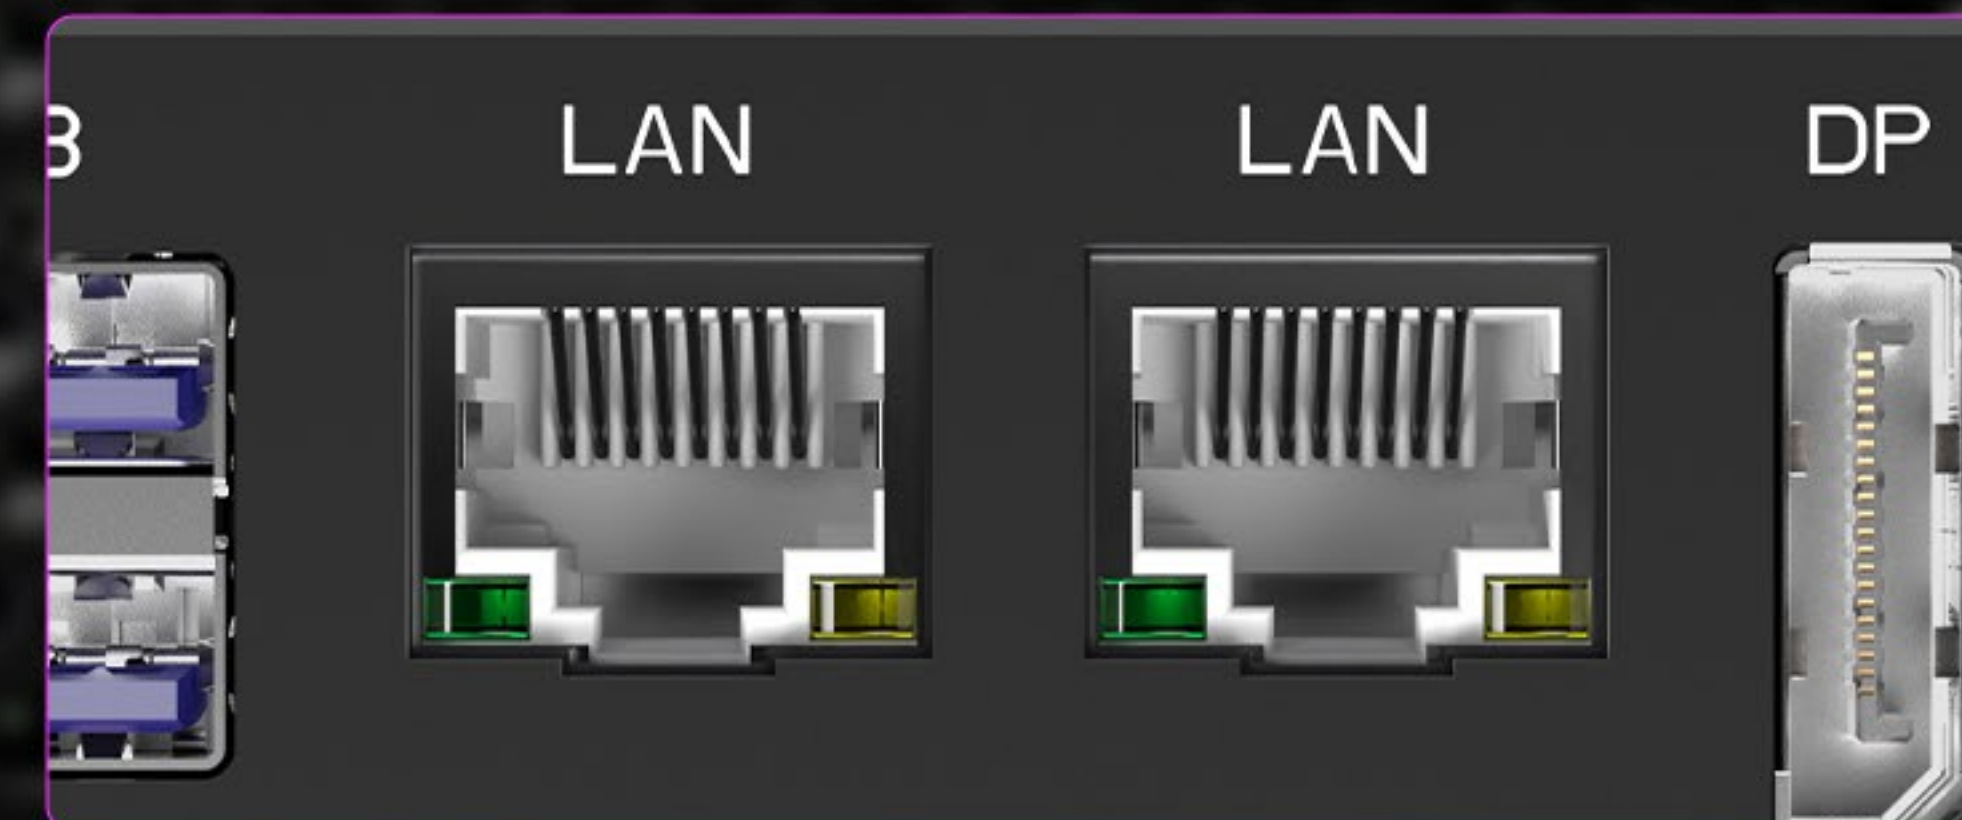

BLOOD FIGHT DAUNTLESS ATHLETICS

Upscale Configuration Brings Superb Gaming Experience

Equipped with excellent CPU and adequate 64G memory, this product can handle multi-task, ensuring high-speed running and fast response of the game and reducing lagging and loading time as well as providing a smooth gaming experience. Superior Graphics Cards and high-resolution monitors provide players with high-quality images, enabling players to enjoy realistic game visual effects. The unique dual 2.5Gbps Ethernet ports bring unparalleled network bandwidth, providing faster response time and more stable network connection and reducing delay and lag in games as well as realizing multi-tasking and network load balance and improving network stability and performance.

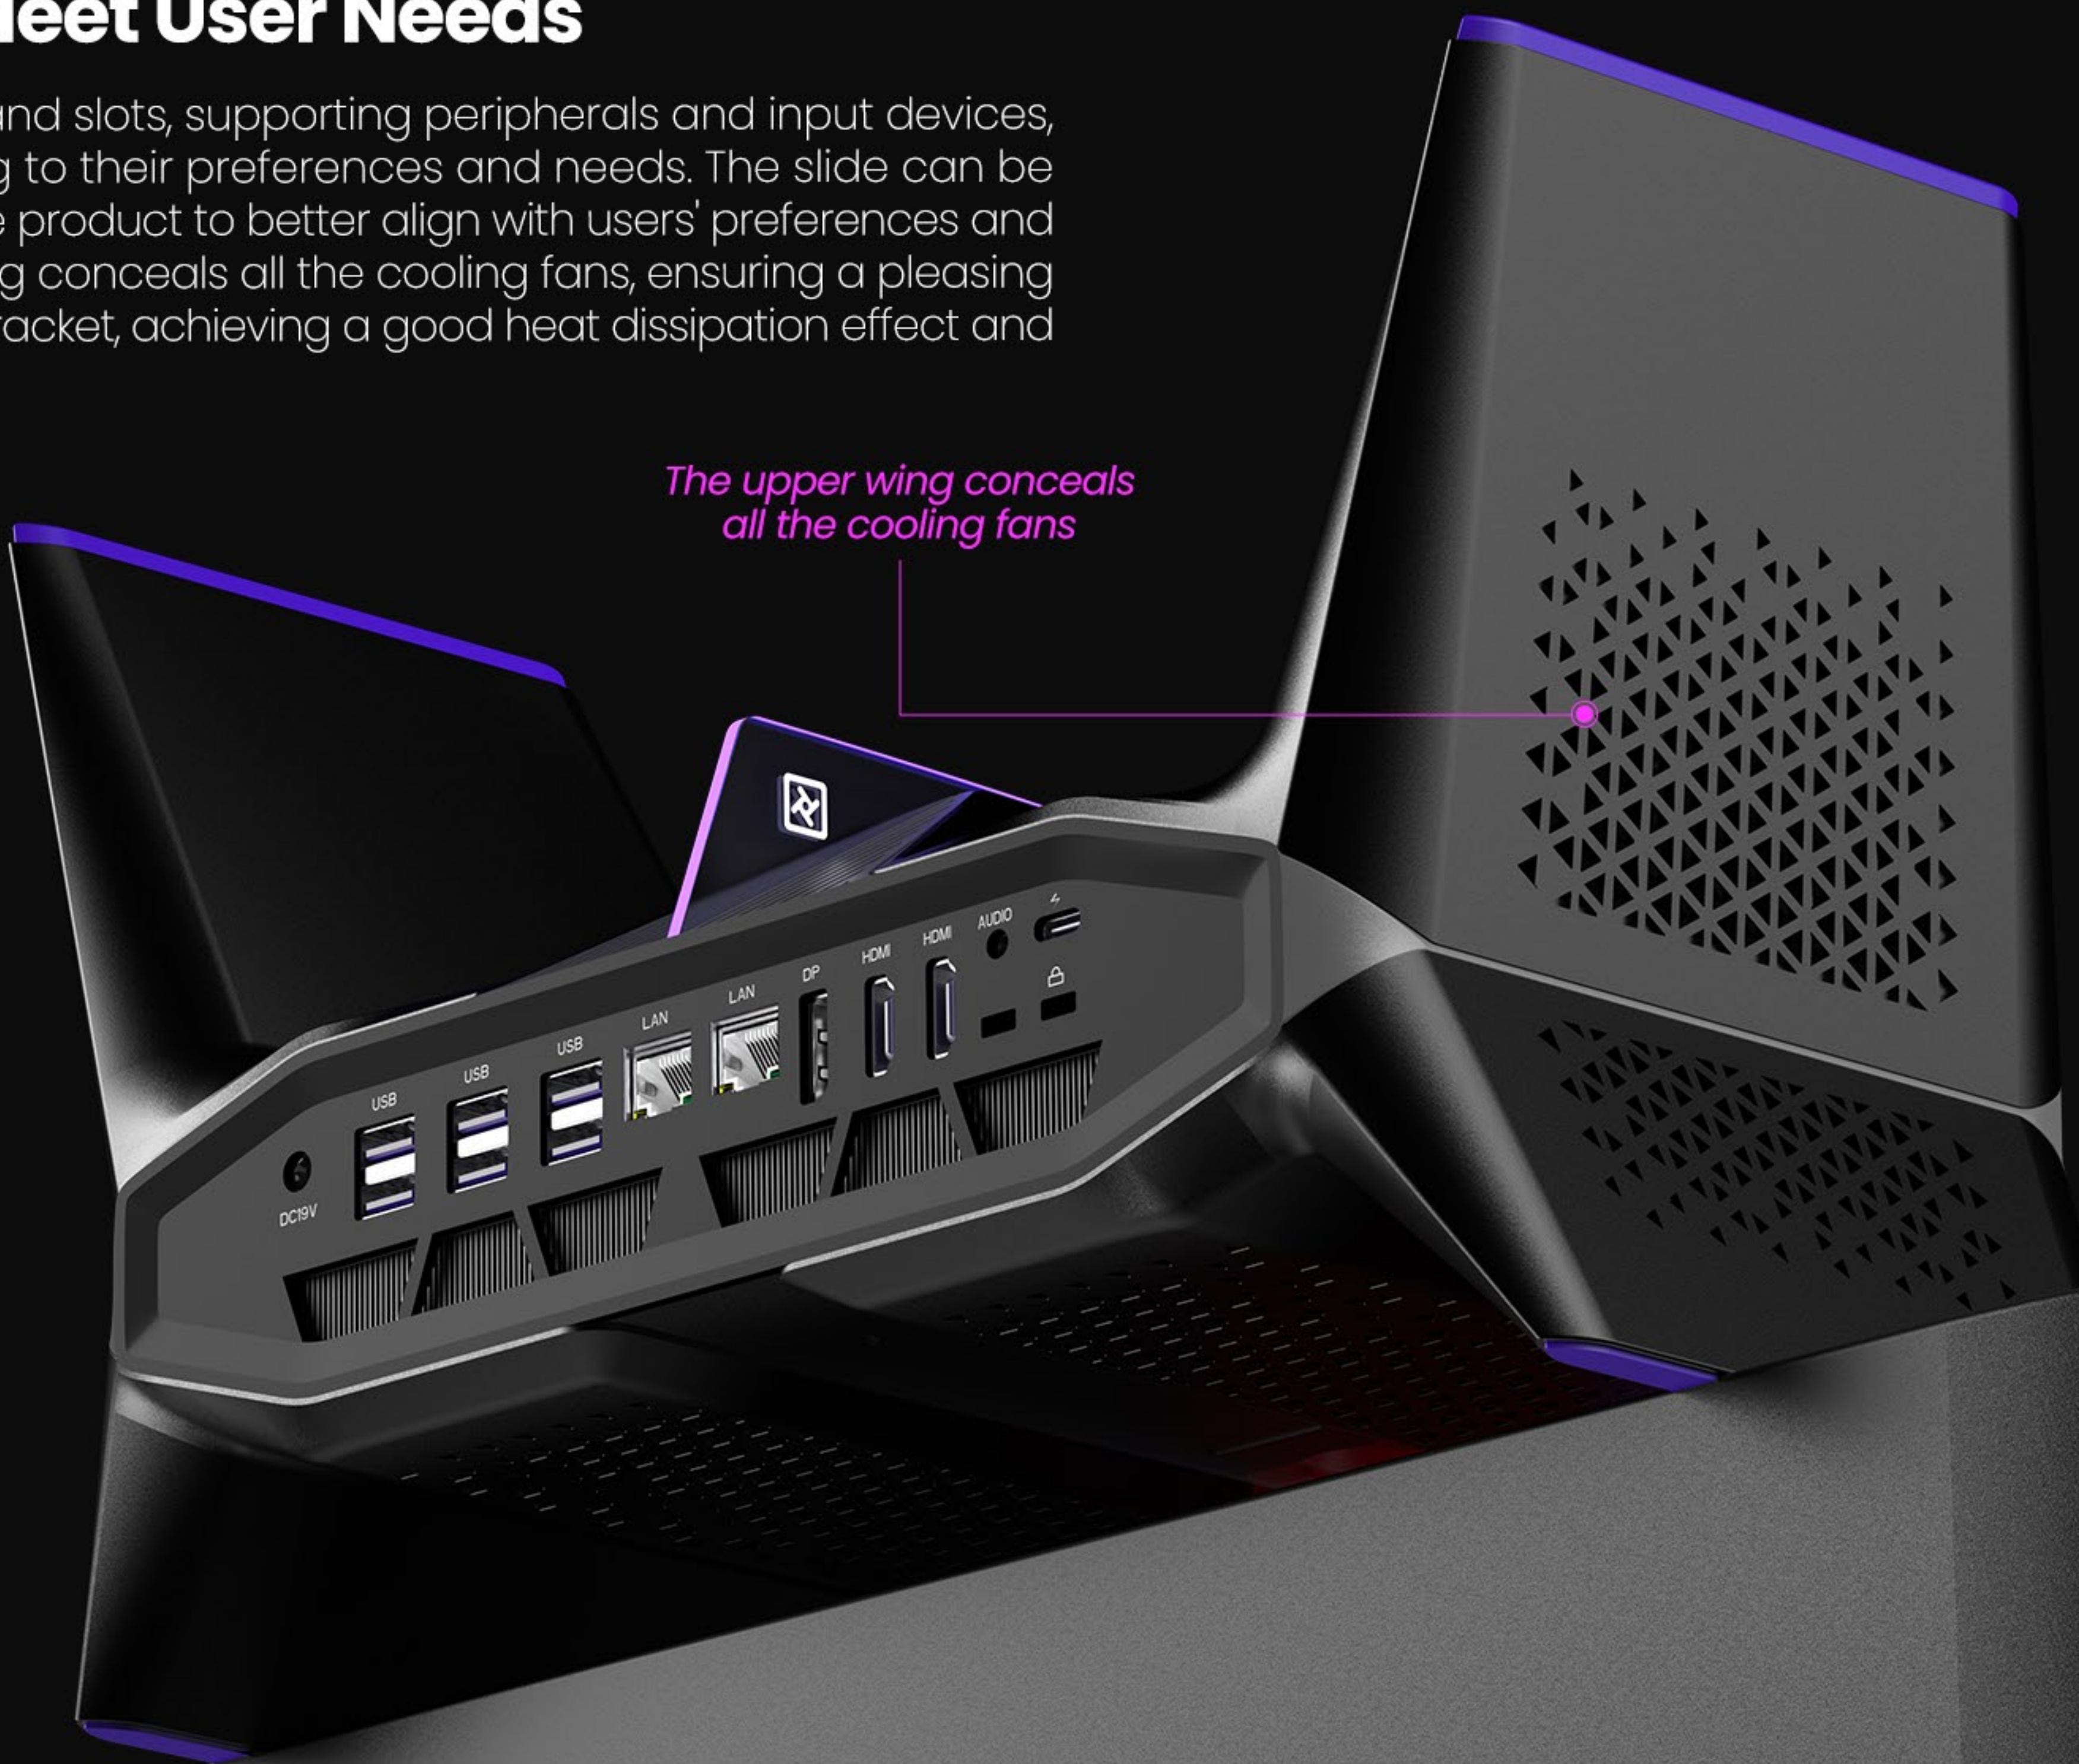

Ultra high network bandwidth 2.5Gbps network port

Personalized Customization to Fully Meet User Needs

This product is equipped with a rich variety of expansion interfaces and slots, supporting peripherals and input devices, allowing users to customize their own gaming PC system according to their preferences and needs. The slide can be customized in design, and the selection of personalized LCD allows the product to better align with users' preferences and usage habits, catering to their individualized demands. The upper wing conceals all the cooling fans, ensuring a pleasing appearance without being obtrusive, while the lower wing acts as a bracket, achieving a good heat dissipation effect and providing a better user experience.

Personalized customization

Eco-friendly Selection of Materials

The product uses PC and ABS materials, these materials have the characteristics of durability, high temperature resistance and their service life is long, which plays an important role in protecting environment and saving resources.
