

# Clink Clicker

Effortless Training and Treat Carrying

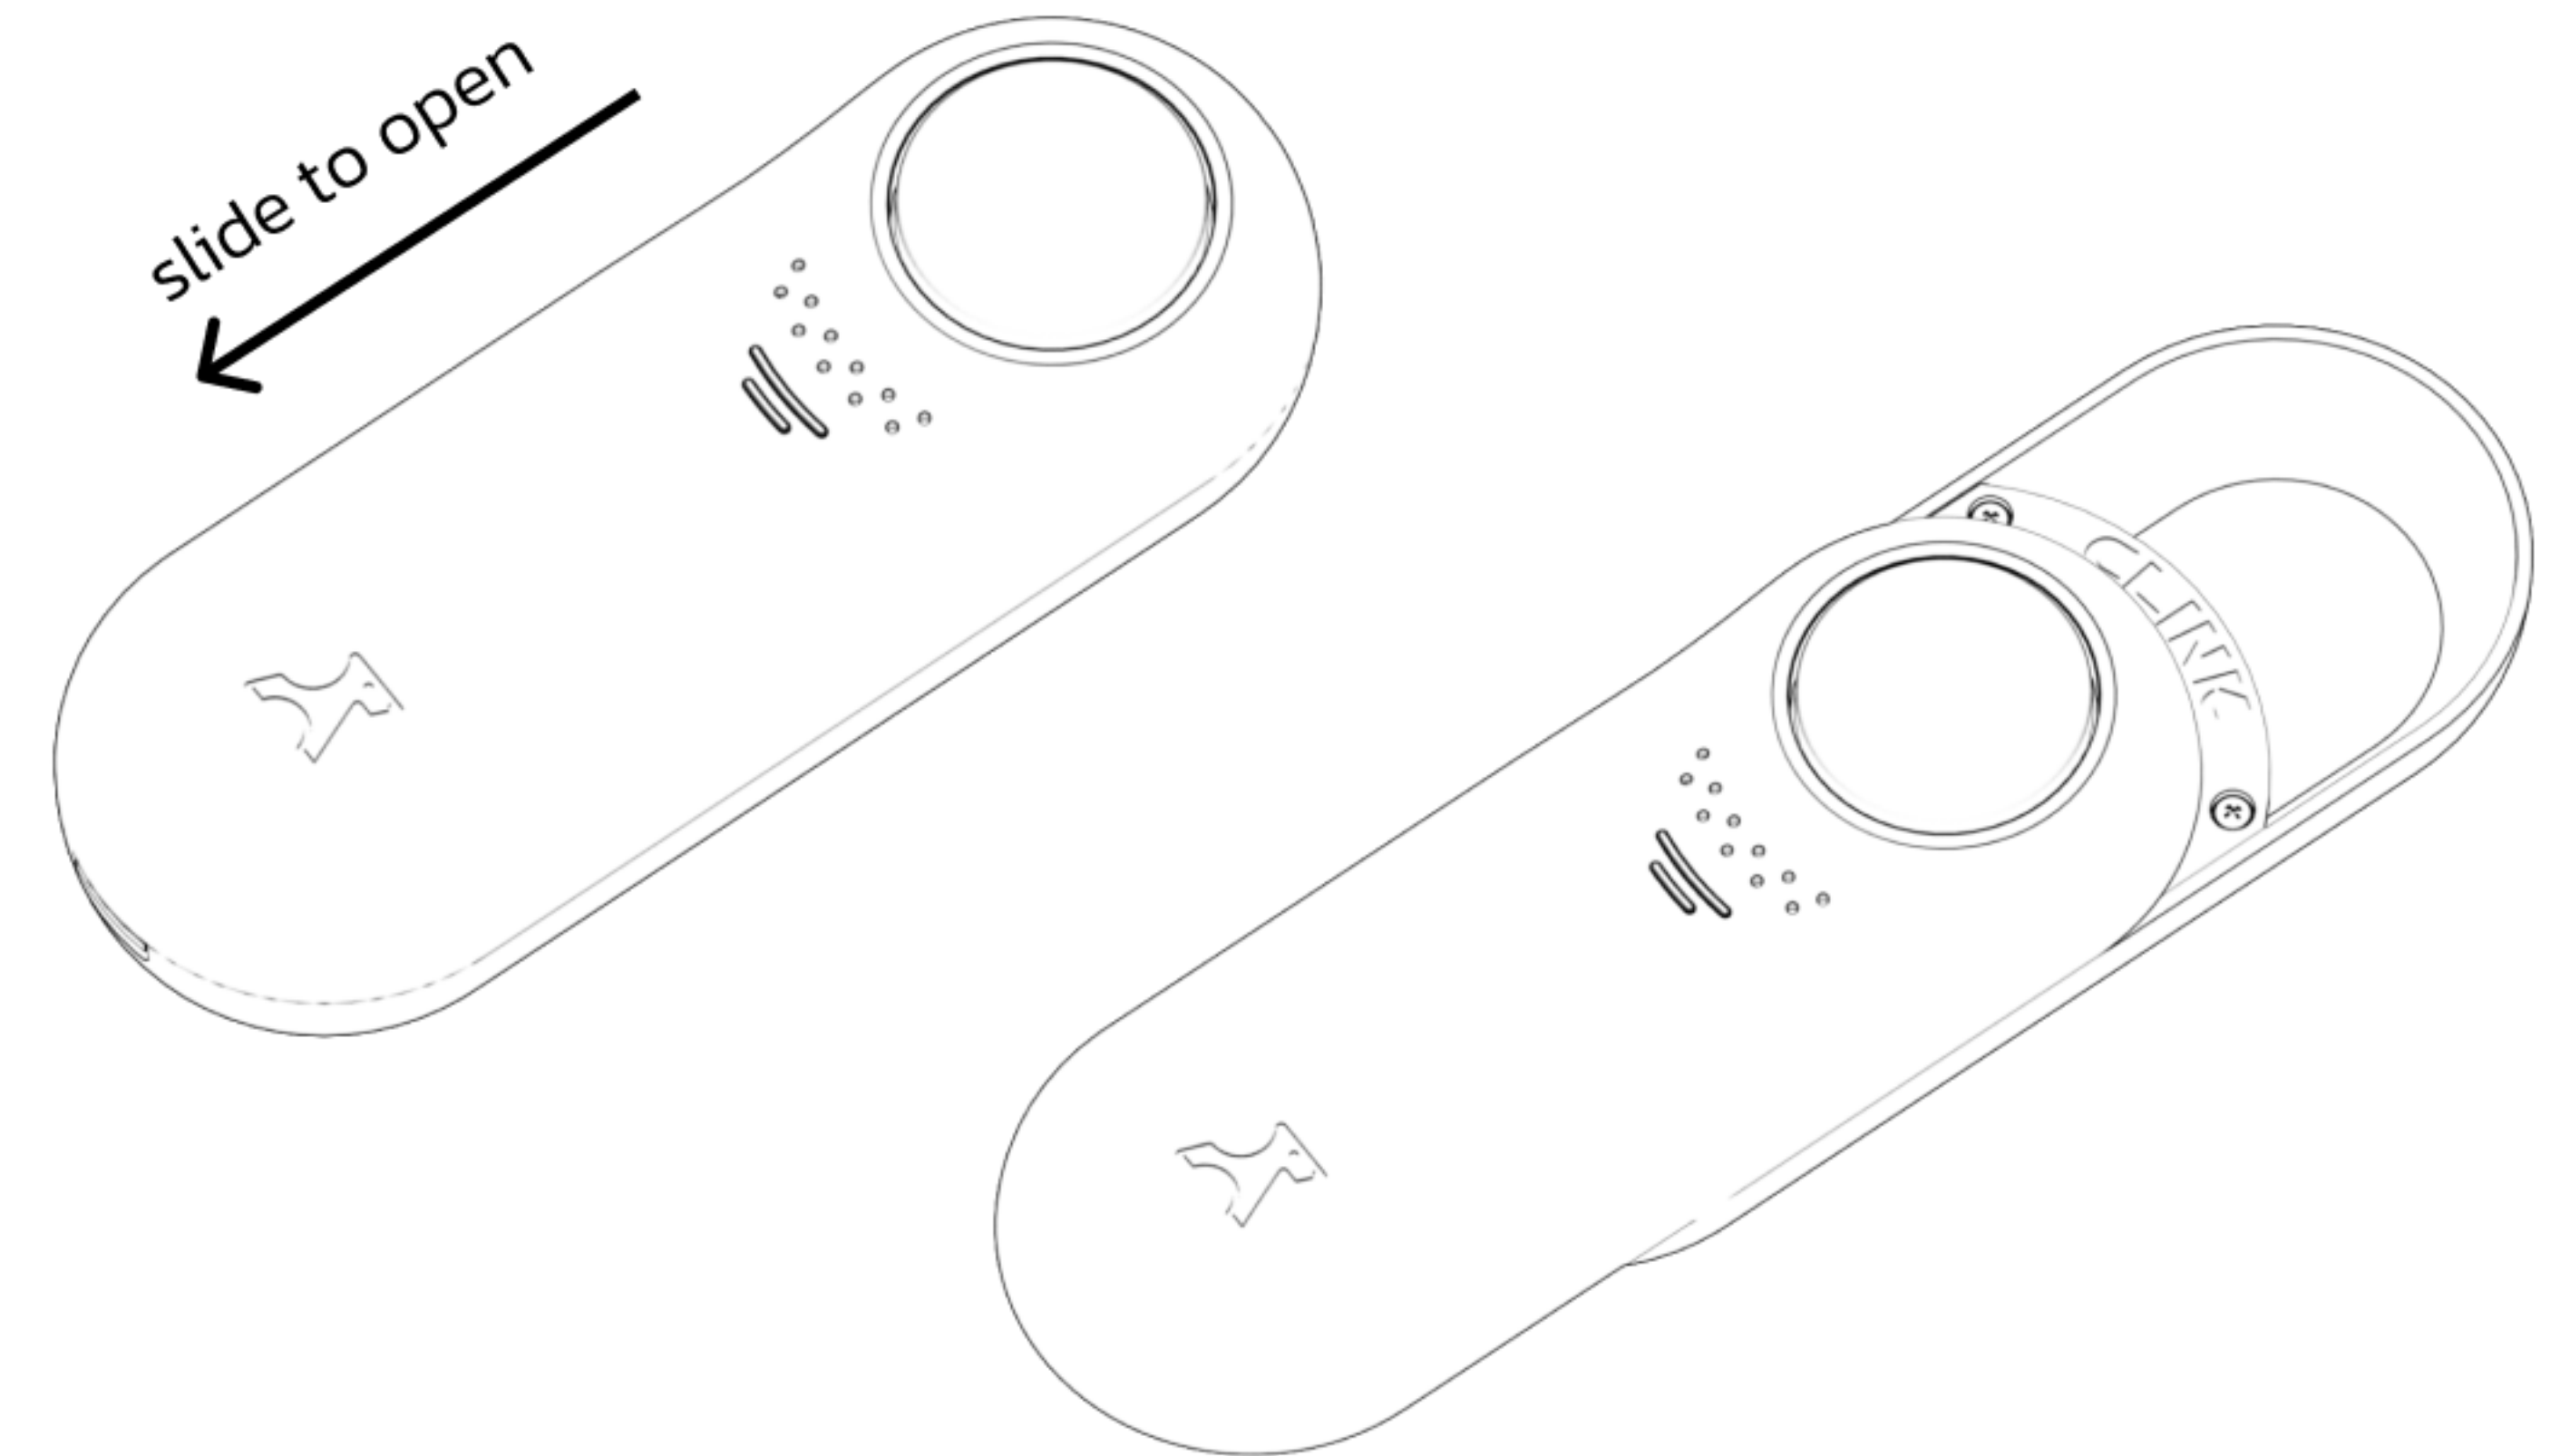

The two screws ensure a secure connection for the treat compartment, protecting the product from damage during collisions, yet they can be easily unscrewed for cleaning as required. However, frequent cleaning is largely unnecessary due to the hygienic ABS+PC material and the inclusion of a desiccant.

The clicker button offers a clear, audible cue that is consistent every time, which is essential for effective clicker training.

# Product Features

## Sliding Mechanism

The sliding mechanism is engineered for reliability, withstanding at least fifty thousand uses to ensure longevity.

It incorporates springs to facilitate smooth movement and enhanced responsiveness, ensuring a satisfying user experience with every slide.

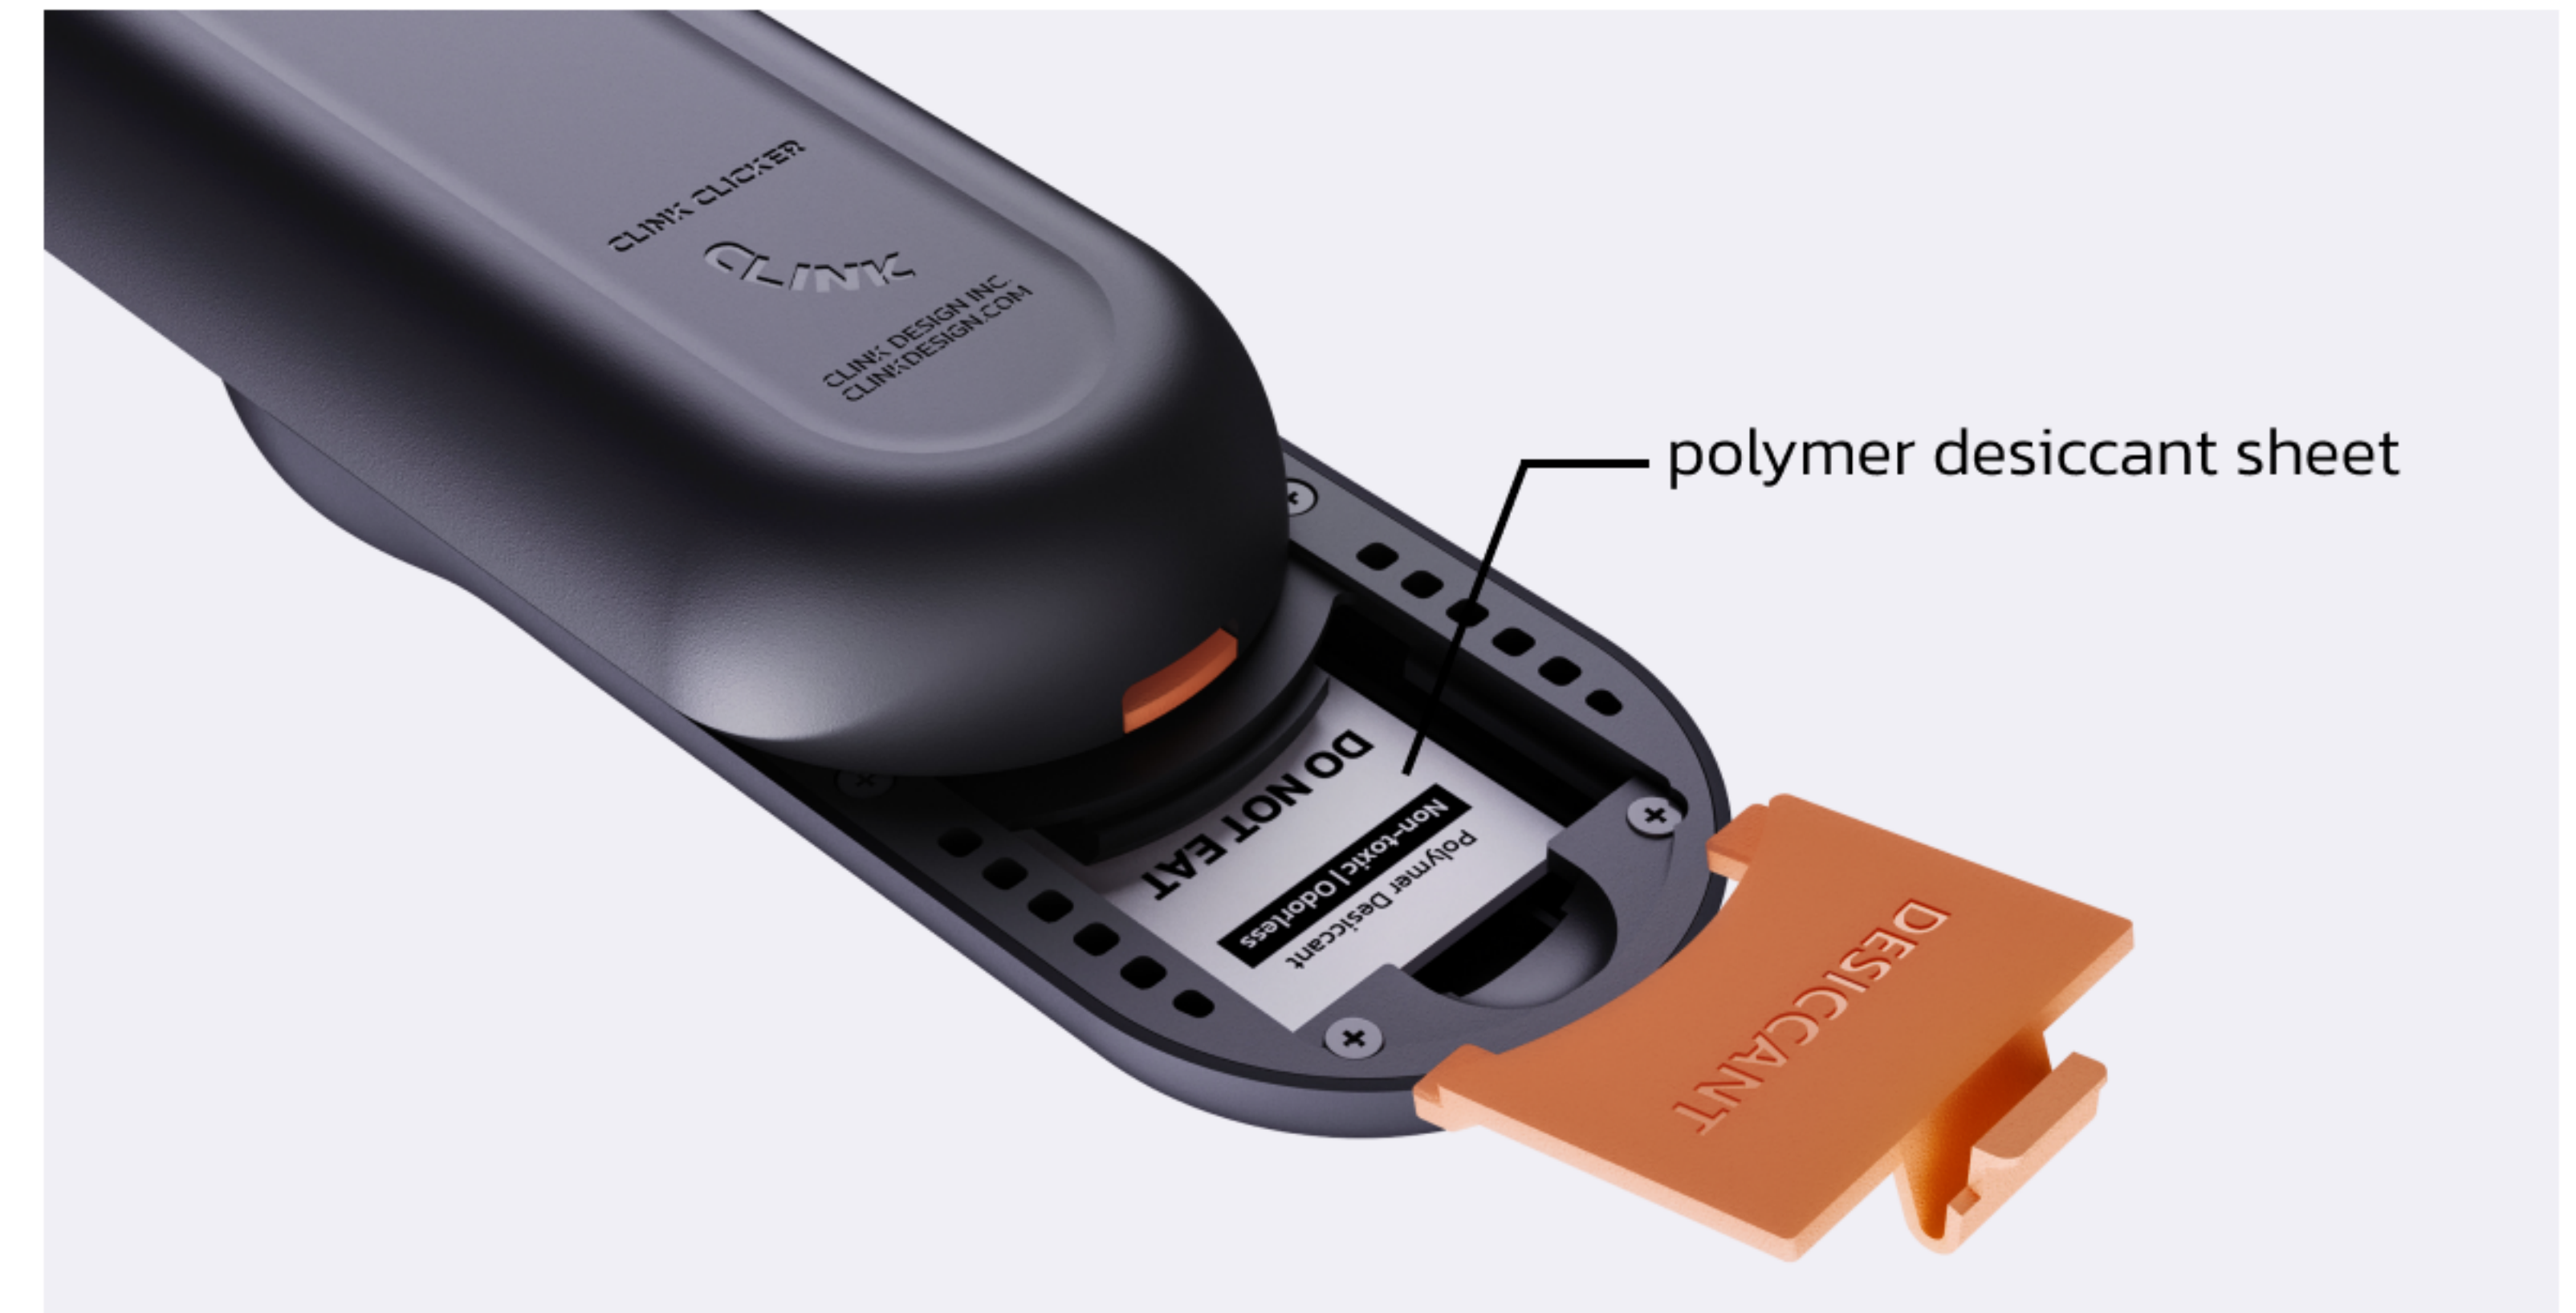

# Product Details

## Polymer Desiccant Sheet

The small holes along the edge are designed for the desiccant, connecting the treat compartment to it for optimal moisture control.

The polymer desiccant sheet from WiseNano represents a new category of desiccant products, notable for its compact size, food-grade safety, and exceptional moisture-absorbing capabilities. It maintains treat freshness and can be easily replaced after a month's usage.

Polymer Desiccant

**Non-toxic | Odorless**

**DO NOT EAT**
