

P H O S P H E N E

"Phosphene" represents more than a toy car collection; it's a fusion of human empathy and innovative design. Each piece is a sensory exploration, offering a unique perspective on color perception.

The Phosphene project began with an ambition to create toy cars for individuals with visual impairments, aiming to communicate the essence of colors through tactile shapes. As our exploration deepened, we recognized the importance of sensitive communication. Our goal isn't to 'teach' about colors, but to share the beauty of sensory diversity. We've embraced a tactile-color design philosophy, inviting everyone to experience and appreciate the world from an enriched, inclusive perspective.

"Phosphene" represents more than a toy car collection; it's a fusion of human empathy and innovative design. Each piece is a sensory exploration, offering a unique perspective on color perception. For example, the transparent car, with its ripple-wave design and substantial weight, offers a cool touch, challenging the traditional concept of color; the black car, inspired by robust trucks, conveys a sense of rationality and reliability with its geometric, matte textures. It represents how we perceive strength and solidity in color. Similarly, the purple car, adorned with parametric diamonds, transitions from tense to relaxed, embodying the mysterious and comforting essence of purple. These, along with others in red, blue, green, yellow, black, and orange, are not just representations of colors but a celebration of diversity and sensory experience.

Phosphene is designed first and foremost as an enjoyable toy. Crafted from a single piece of solid, polished recycled plastic, its simple yet elegant structure is enhanced with ball bearings and rubber tires, fixed with titanium M3 screws. This approach not only enriches the tactile experience but also invites creative assembly and customization, adding an extra layer of fun and interaction.
