HOW THE COZY WORKS

The Cozy is **an insulating enclosure** that is installed **over existing radiators** and traps **warm air inside**

When the system senses that a room needs heat, **a small fan turns on** to **circulate warm air** through the room

When the **desired temperature is reached**, the fan turns off to **trap heat** and **prevent overheating**

The result: comfortable rooms, cost savings, and reduced building emissions

**WORKS
ON ALL TYPES
OF
RADIATORS**

GREAT FOR BUILDINGS

- › Get Cozys for no money down
- › Saves up to 45% on heating expenses
- › Eliminates 95% of heating complaints
- › Reduces maintenance costs through real-time analytics
- › Eligible for all utility rebate programs
