Lamp as a modul

What does it mean?

To further set and adapt the lighting system to the space, the lamp is added as a module to the modular system. This is made possible by the variety of colors in the lamp cap. This color variation, along with the Beam angle, the Color temprature and Lumen, creates very special lighting structure.

Multi-piece modules, more choice

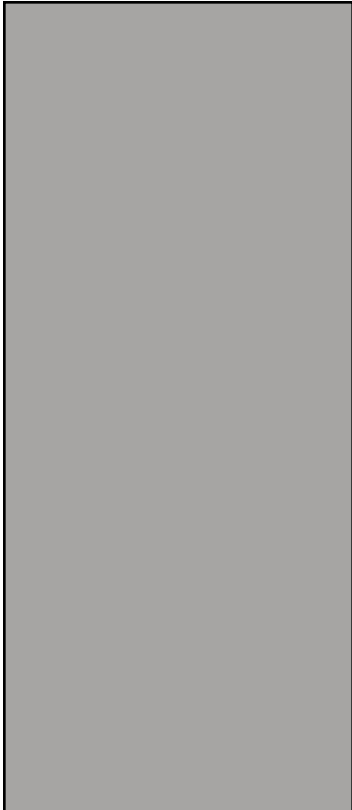

How?

Each piece of multi-piece modules can have its own unique color. This is to match the lighting with the architectural space as much as possible.
