

Water-Repellent Toray High-Gloss Puffer Jacket

...

A machine-washable high-quality stylish down jacket

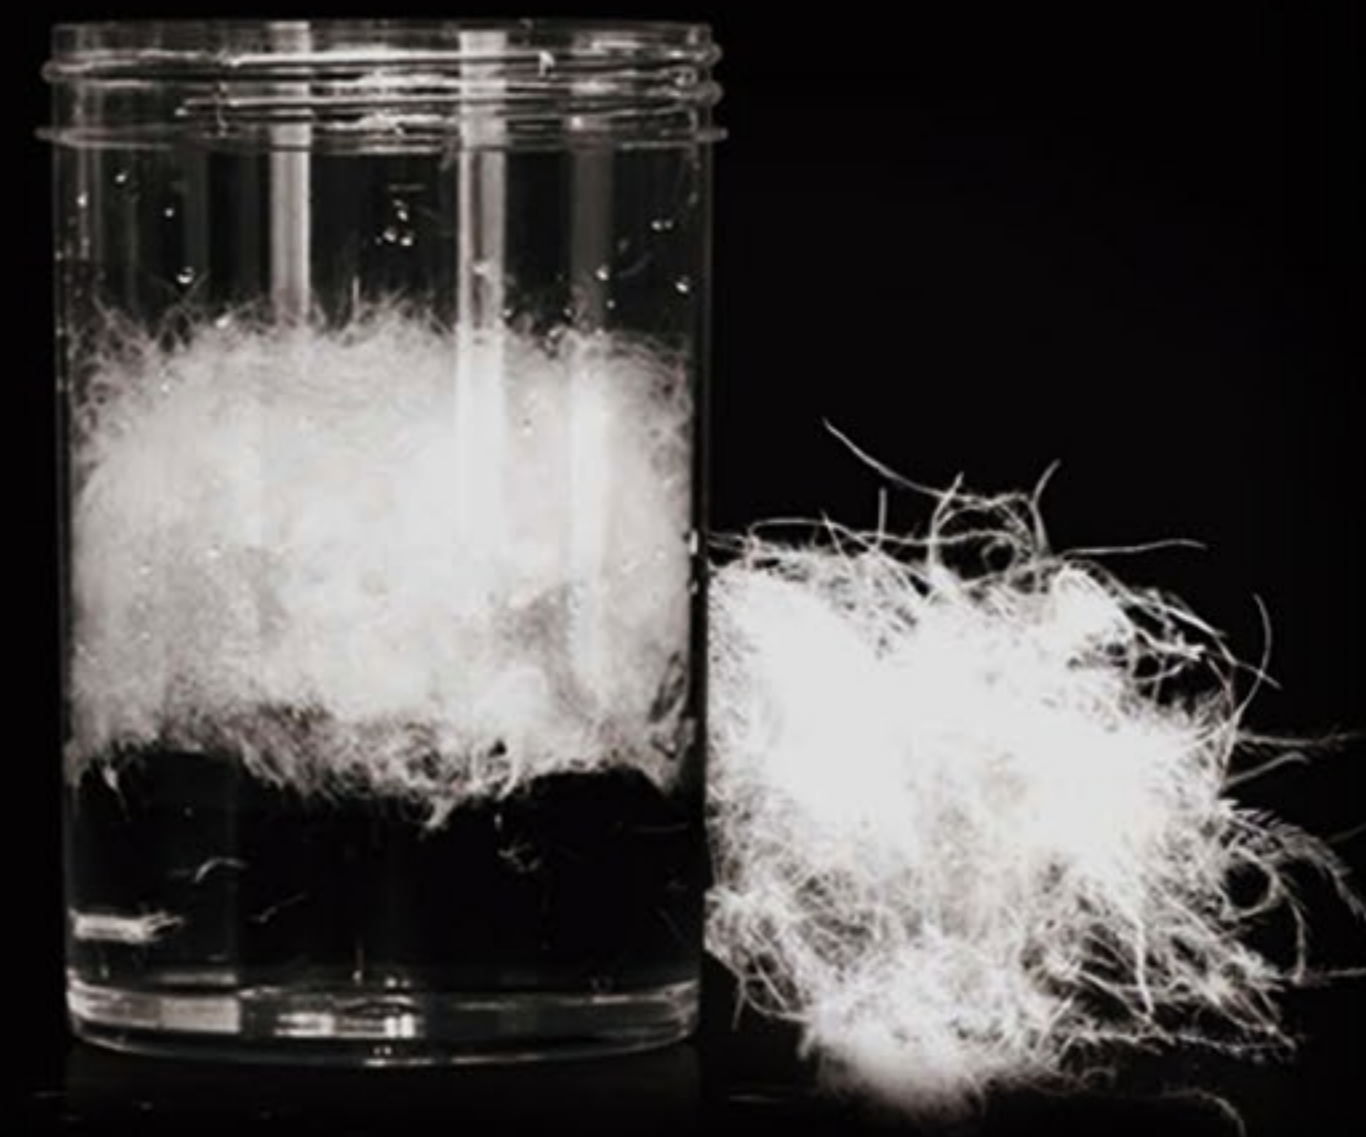

New Concept- Machine Washable Down, Quick Drying and Fluffing

Regular down jackets are not machine washable or are easy to be tangled after being washed in machines, resulting in short lifecycles. To this end, LILANZ innovatively introduces water repellent down to launch Water-Repellent Toray High-Gloss Puffer Jacket that is machine washable and achieves quick drying and fluffing. This down jacket was certified by WRCA (World Records Certification Authority) as the Down Jacket with the Highest Water Repellency and the World-Leading Ultra-Warmth Technology Water-Repellent Down Jacket.

Excellent Water Repellency

This down jacket adopts Downtek PFC free™ super water-repellent down. Thanks to the all-new non-PFC innovative cationic water repellency technology, it remains Level-5 dry after being shaken in water for over **10,000** minutes, according to a water repellency test based on the standard of International Down and Feather Bureau (IDFB). This water-repellent technology enhances the drying speed of down by **20%-30%** compared with conventional waterproof technologies, restoring the fluffiness of this down jacket quickly without causing clusters or tangles.

Dual Water Resistance, Suitable for Various Weather Conditions

This down jacket utilizes Japan Toray High-Gloss Black Sheer Fabric that is formed through cutting-edge high-density weaving and treated with special water repellency technology, enabling dual water resistance from the inside out, so it is suitable for diverse weather conditions such as rain and storm. In addition, this fabric is breathable, avoiding stuffiness during wearing.

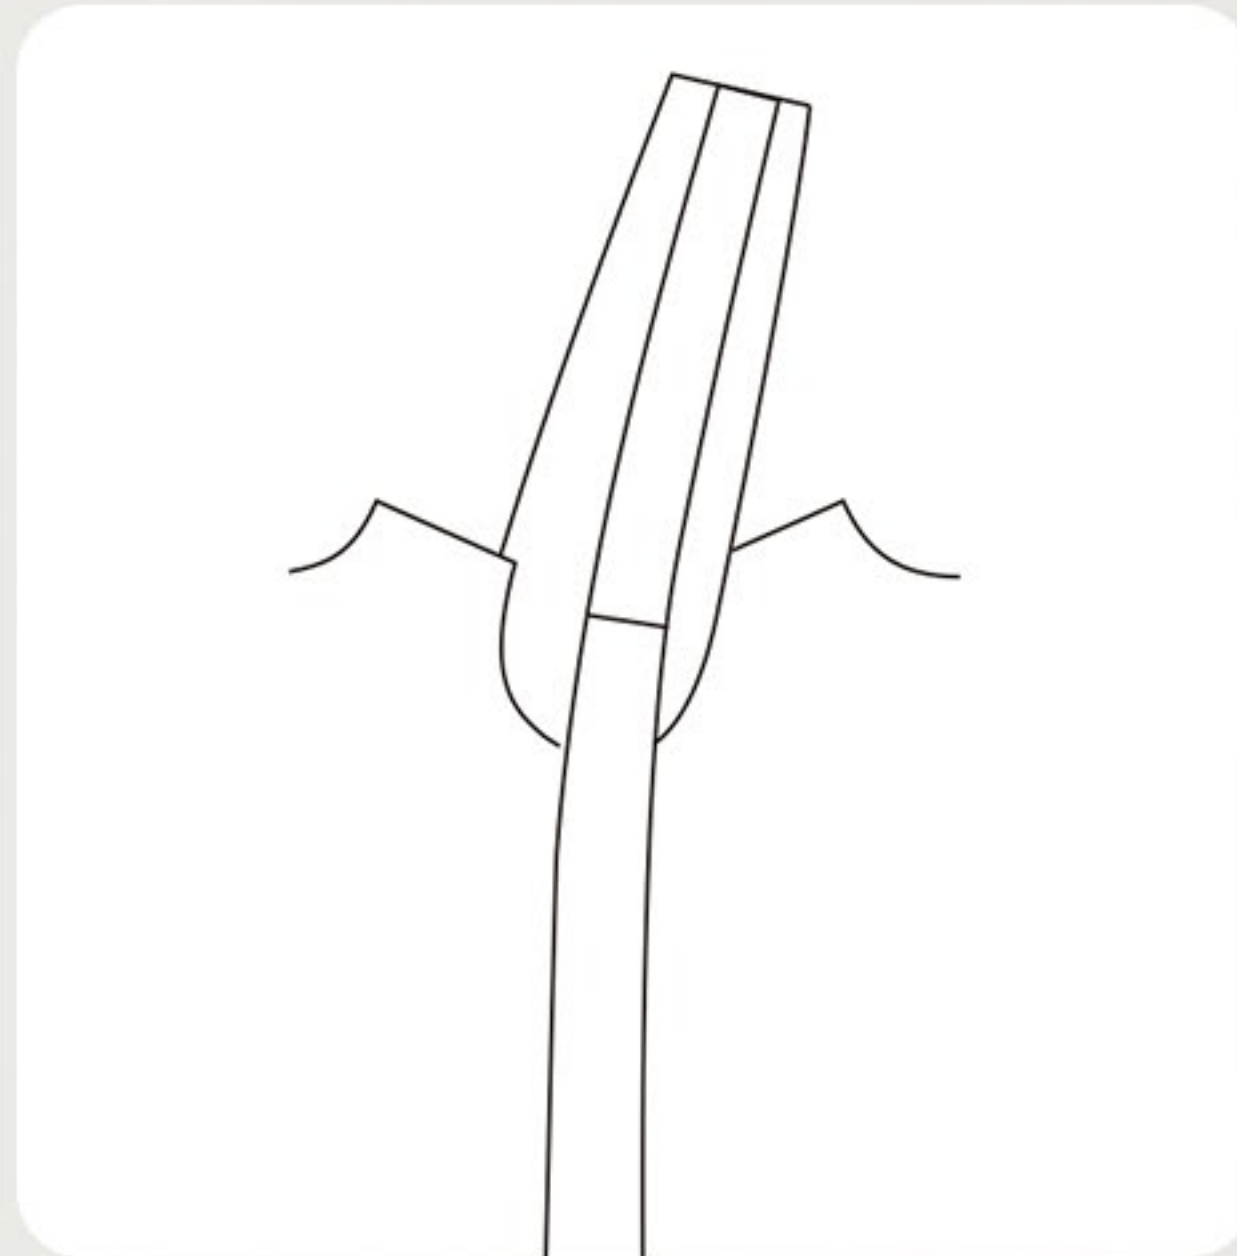

Strong Cold Resistance, Constant Heat Retention

This down jacket adopts Graphene Anti-static Heat-Retention Lining Fabric, using far-infrared thermal technology to achieve an excellent thermal effect. Moreover, the white duck down enjoys the fluffiness of **800+FP** after being processed through the cationic water repellency technology, with a high down content of **95%**, further enhancing warmth.

Stylish Cut Design

The newly upgraded 3D cut design, with independent cut parts under the arm, makes the down jacket simple and slightly loose, facilitating movement. The fabric is coated in a gloss finish, delivering a unique visual impact and enhancing the sense of fashion, making this down jacket suitable for daily commuting and outdoor activities.

Detailed Design, Doubled Warmth

The adjustable drawstring system and hidden windproof cuffs help enhance wind resistance and warmth retention while creating a minimalist fashion style.
