Outdoor Portability Design

Its compact design facilitates easy placement within a backpack or luggage, allowing for convenient portability, and it can be positioned either horizontally or vertically based on spatial requirements. Additionally, the integrated Eco Mode enables the speaker to achieve up to 28 hours of battery life by intelligently optimizing energy consumption, thereby minimizing the need for frequent recharging.

Immersive Audio Experience

The incorporation of two aluminum full-range drivers and one passive bass radiator ensures precise separation of the left and right channels in stereo mode, significantly enhancing the perception of space and audio presence. Coupled with AI equalizer technology, the speaker optimally adjusts sound quality based on its placement, ensuring optimal sound quality. During music play, the groove area generates significant vibrations, contributing to an immersive audio-visual experience.

Stereo Surround Sound

The speaker employs Dynamore surround sound technology, effectively enhancing the sound field width, and thereby providing users with a three-dimensional listening experience. Furthermore, it can be positioned either horizontally or vertically based on spatial requirements, and it can enhance the immersive experience through dual-device stereo playback, delivering a more vivid and realistic audio effect for users.

Groove Design

The body features a groove design that fits the curvature of the fingers, making it easy for users to grip and move the speaker. Additionally, it offers shock absorption and noise reduction, further enhancing the user experience.

Superior Protection

The speaker features an IP67 dust and waterproof resistance, which allows it to function stably across diverse environments whether exposed to rain or dust. This enhances the durability of the product, and decreases the likelihood of damage from environmental factors, further minimizing the production of electronic waste.
