

Car Vacuum Cleaner

Revitalize Lightweight Mobile Cleaning Experience

Reimagine the Form of In-Car Cleaning

Traditional in-car vacuum cleaners are often limited by their bulky size and inconvenient operation, restricting their usage scenarios. This product draws inspiration from a T-shaped hair dryer, optimizing motor airflow to improve heat dissipation efficiency. It also repurposes exhaust airflow for a blowing function, creating an innovative cleaning mode that integrates suction and blowing. This breaks away from the single-function design of traditional vacuum cleaners, offering users a more convenient and efficient cleaning experience.

Ultra-Lightweight, Precision Control

From an ergonomic perspective, this product weighs only 370g, making one-handed operation effortless. The ergonomically designed grip enhances stability and prevents operational errors caused by fatigue. An independent light at the front allows for precise cleaning in low-light environments. Red and green indicator lights clearly show different power levels, making operation intuitive and straightforward, further enhancing user interaction.

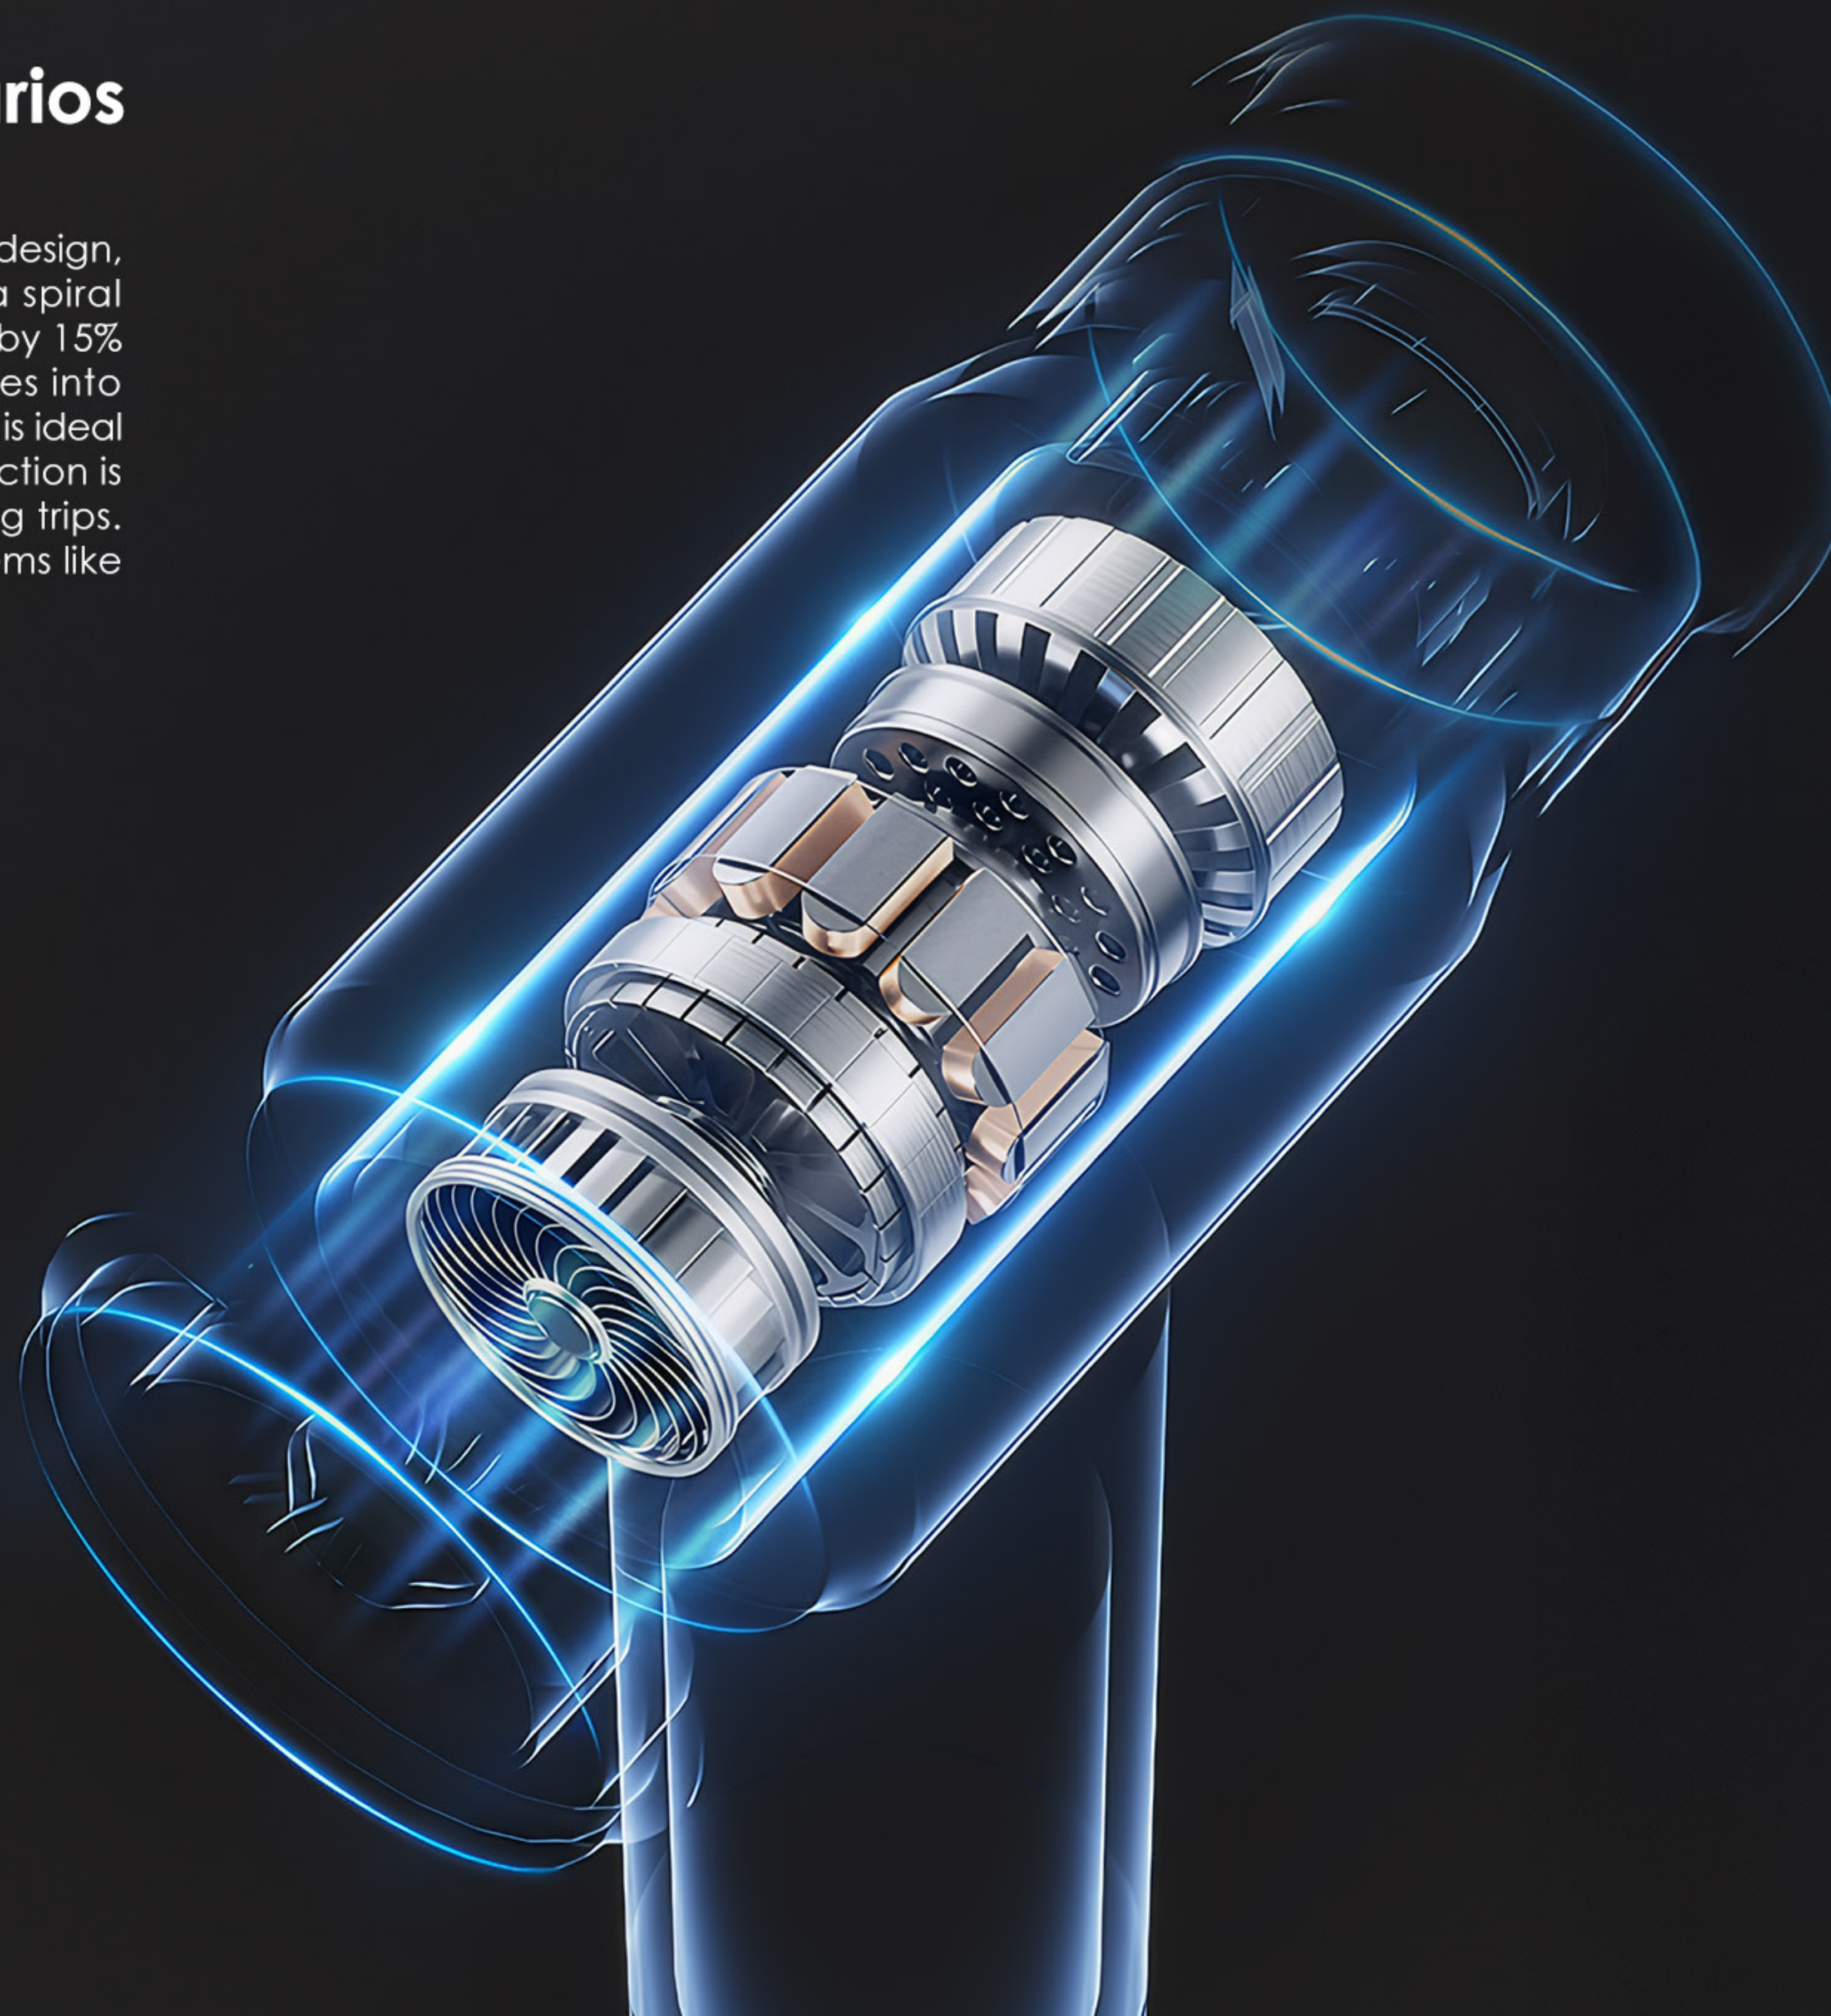

Ultra-Lightweight, Precision Control

Multi-Functional, Versatile Across Scenarios

This product features a versatile set of nozzles and an innovative spiral air duct design, enabling it to effortlessly tackle a variety of scenarios: The outlet adopts a spiral structure that focuses airflow into a high-speed vortex, increasing air pressure by 15% compared to conventional designs. The slim suction nozzle precisely reaches into crevices between seats for efficient dust extraction. The vacuum packing nozzle is ideal for compressing down jackets for travel or home organization. Its blowing function is perfect for cleaning keyboards or aiding fire starting during outdoor camping trips. Additionally, the inflation feature provides convenient inflation services for items like swimming rings and air mattresses.

Green Craftsmanship

For eco-compatibility, this product uses recyclable plastic and water-based eco-friendly paint to reduce environmental impact during manufacturing. The black body paired with UV-coated decorative rings presents a sleek, refined appearance while enhancing durability. The laser-textured design on the side adds visual depth and serves as an anti-counterfeiting measure, ensuring distinctive brand recognition.

Elegant Design, Enhanced Durability

Unique Brand Identity, Guaranteed

Crafting Personalized Product Experiences

The design language of this product focuses on minimalist yet tech-savvy aesthetics. The T-shaped structure and gradient laser texture create a strong visual flow and distinctiveness, expressing both aesthetic appeal and unique product characteristics. By integrating five functions—vacuuming, vacuum sealing, blowing, inflating, and lighting—this product truly overcomes the functional limitations of traditional in-car vacuum cleaners, offering a comprehensive solution for various scenarios.
