

Hyaluronic Acid Base Layer Set

Featuring a "moisturizing & shaping" dual-function system, the set elevates clothing beyond mere coverage and warmth, evolving into an essential daily item with active skincare benefits.

Hyaluronic Acid Base Layer Set

A Convenient "Skincare While Wearing" Experience

The set utilizes innovative hyaluronic acid microcapsule technology, where hyaluronic acid molecules are encapsulated within tiny capsules. Through the dual action of skin friction and body heat, these microcapsules gradually release moisturizing factors. This effectively prevents static electricity while offering a continuous hydration solution for autumn and winter skin issues such as dryness, tightness, and dullness.

Hyaluronic Acid Nourishment & Care

Long-Lasting Moisture for Over 12 Hours

Hyaluronic acid molecules absorb ambient moisture released by the skin, replenishing themselves to a water-saturated state, thereby enhancing humidity between fibers and skin for intelligent moisture regulation.

Innovative Integration of Warm Ginger Fiber

The set incorporates warm ginger fiber fabric, creating an "intelligent warmth circulation system" that converts humidity into thermal energy to effectively resist cold.

Warm Ginger Fiber

Snug Fit Without Pressure

Crafted with 3D seamless technology, the set fits like a second skin—offering zero compression and seamless comfort without friction points. The convenient round neckline pairs with multiple tailored fits to accommodate various body types, fulfilling both inner layer and outerwear requirements.

Scientific Shaping Meets All-Day Comfort

The back features an X-shaped sculpting zone, the sides include waist-defining panels, and the lower abdomen is designed with a V-shaped contour area—using structural design to achieve a sculpting effect that meets the diverse beauty needs of modern women.

10A-Grade Antibacterial Protection

The set offers 10A-level antibacterial performance, maintaining its effect even after 300 washes—where technology empowers fashion to redefine the boundaries of functional apparel.
